

Spatial Data Processing for Monitoring of Natural and Anthropogenic Processes (SDM-2019)

This volume contains the proceedings of the All-Russian Conference “Spatial Data Processing for Monitoring of Natural and Anthropogenic Processes”. The Conference is the latest in a series of events held in different locations across Siberia since 2008. In 2019 the Conference was held in Berdsk from the 26th to the 30th of August.

The papers were presented in three sections: Integrated Geoinformational Technologies and Systems for Monitoring Applications, Operative Regional Satellite Monitoring of the Environment, and Modelling and Monitoring of Ecological Processes and Systems. Every day of the Conference started with two keynote talks that together represent the main directions of research in spatial data processing in Russia.
