

*Interior Point Algorithms: Theory and Analysis.* By Yinyu Ye. John Wiley & Sons, New York. (1997). 418 pages. \$74.95.

Contents:

Preface. List of figures 1. Introduction and preliminaries. 2. Geometry of convex inequalities. 3. Computation of analytic center. 4. Linear programming algorithms. 5. Worst-case analysis. 6. Average-case analysis. 7. Asymptotic analysis. 8. Convex optimization. 9. Nonconvex optimization. 10. Implementation issues. Bibliography. Index.

*Annotated Bibliographies in Combinatorial Optimization.* Edited by Mauro Dell'Amico, Francesco Maffioli, Silvano Martello John Wiley & Sons, Chichester, England. (1997). 471 pages. \$60.00.

Contents:

Preface. List of contributors. 1. Selected books in and around combinatorial optimization (F. Maffioli and S. Martello). 2. Hardness of approximation (V. Kann and A. Panconesi). 3. Polyhedral combinatorics (K. Aardal and R. Weismantel). 4. Branch-and-cut algorithms (A. Caprara and M. Fischetti). 5. Matroids and submodular functions (A. Frank). 6. Perfect, ideal and balanced matrices (M. Conforti, G. Cornuéjols, A. Kapoor and K. Vuskovic). 7. Advances in linear optimization (C. Roos and T. Terlaky). 8. Decomposition and column generation (F. Soumis). 9. Stochastic integer programming (L. Stougie and M.H. van der Vlerk). 10. Randomized algorithms (M. Goemans, D. Karger and J. Kleinberg). 11. Local search (E. Aarts and M. Verhoeven). 12. Sequencing and scheduling (J.A. Hoogeveen, J.K. Lenstra and S.L. Van de Velde). 13. The traveling salesman problem (M. Jünger, G. Reinelt and G. Rinaldi). 14. Vehicle routing (G. Laporte). 15. Max-cut problem (M. Laurent). 16. Location problems (M. Labbé and F.V. Louveaux). 17. Flows and paths (R.K. Ahuja). 18. Network design (A. Balakrishnan, T.L. Magnanti and P. Mirchandani). 19. Network connectivity (S. Raghavan and T.L. Magnanti). 20. Linear assignment (M. Dell'Amico and S. Martello). 21. Quadratic and three-dimensional assignments (R.E. Burkard and E. Cela). 22. Cutting and packing (H. Dyckhoff, G. Scheithauer and J. Terno). 23. Set covering problem (S. Ceria, P. Nobile and A. Sassano). 24. Combinatorial topics in VLSI design (R.H. Möhring and D. Wagner). 25. Computational molecular biology (M. Vingron, H.-P. Lenhof and P. Mutzel). Author Index.

*Advances in Neural Information Processing Systems 9: Proceedings of the 1996 Conference.* Edited by Michael C. Mozer, Michael I. Jordan and Thomas Petsche. MIT Press, Cambridge, MA. (1997). 1098 pages. \$70.00.

Contents:

Preface. NIPS committees. Reviewers.

I. Cognitive science. Text-based information retrieval using exponentiated gradient descent (Ron Papka, James P. Callan and Andrew G. Barto). Why did TD-Gammon work? (Jordan B. Pollack and Alan D. Blair). Neural models for part-whole hierarchies (Maximilian Riesenhuber and Peter Dayan).

II. Neuroscience. Temporal low-order statistics of natural sounds (H. Attias and C.E. Schreiner). Reconstructing stimulus velocity from neuronal responses in area MT (Wyeth Bair, James R. Cavanaugh and J. Anthony Movshon). 3D object recognition: A model of view-tuned neurons (Emanuela Bricolo, Tomaso Poggio and Nikos Logothetis). A hierarchical model of visual rivalry (Peter Dayan). Neural network models of chemotaxis in the nematode *Caenorhabditis Elegans* (Thomas C. Ferrée, Ben A. Marcotte and Shawn R. Lockery). Extraction of temporal features in the electrosensory system of weakly electric fish (Fabrizio Gabbiani, Walter Metzner, Ralf Wessel and Christof Koch). A neural model of visual contour integration (Zhaoping Li). Learning exact patterns of quasi-synchronization among spiking neurons from data on multi-unit recordings (Laura Martignon, Kathryn Laskey, Gustavo Deco and Eilon Vaadia). Complex-cell responses derived from center-surround inputs: The surprising power of intradendritic computation (Bartlett W. Mel, Daniel L. Ruderman and Kevin A. Archie). Orientation contrast sensitivity from long-range interactions in visual cortex (Klaus R. Pawelzik, Udo Ernst, Fred Wolf and Theo Geisel). Statistically efficient estimations using cortical laterla connections (Alexandre Pouget and Kechen Zhang). An architectural mechanism for direction-tuned cortical simple cells: The role of mutual inhibition (Silvio P. Sabatini, Fabio Solari and Giacomo M. Bisio). Cholinergic modulation preserves spike timing under physiologically realistic fluctuating input (Akaysha C. Tang, Andreas M. Bartels and Terrence J. Sejnowski). A model of recurrent interactions in primary visual cortex (Emanuel Todorov, Athanassios Siapas and David Somers).

III. Theory. Neural learning in structured parameter spaces—Natural Riemannian gradient (Shun-ichi Amari). For valid generalization, the size of the weights is more important than the size of the network (Peter L. Bartlett). Dynamics of training (Siegfried Bös and Manfred Opper). Multilayer neural networks: One or two hidden layers? (G. Brightwell, C. Kenyon and Hélène Paugam-Moisy). Support vector regression machines (Harris Drucker, Chris J.C. Burges, Linda Kaufman, Alex Smola and Vladimir Vapnik). Size of multilayer networks for exact learning: Analytic approach (André Elisseeff and Hélène Paugam-Moisy). The effect of correlated input data on the dynamics of learning (Søren Haljær and Ole Winther). Practical confidence and prediction intervals (Tom Heskes). Statistical mechanics of the mixture of experts (Kukjin Kang and Jong-Hoon Oh). MLP can provably generalize much better than VC-bounds indicate (A. Kowalczyk and H. Ferrá). Radial basis function networks and complexity regularization in function learning (Adam Krzyżak and Tamás Linder). An apobayesian relative of Winnow (Nick Littlestone and Chris Mesterharm). Noisy spiking neurons with temporal coding have more computational power than sigmoidal neurons (Wolfgang Maass). On the effect of analog noise in discrete-time analog computations (Wolfgang Maass and Pekka Orponen). A mean field algorithm for Bayes learning in large feed-forward neural networks (Manfred Opper and Ole Winther). Removing noise in on-line search using adaptive

batch sizes (Genevieve B. Orr). Are Hopfield networks faster than conventional computers? (Ian Parberry and Hung-Li Tseng). Hebb learning of features based on their information content (Ferdinand Peper and Hideki Noda). The generalization cost of RAMnets (Richard Rohwer and Michal Morciniec). Learning with noise and regularizers in multilayer neural networks (David Saad and Sara A. Solla). A variational principle for model-based morphing (Lawrence K. Saul and Michael I. Jordan). Online learning from finite training sets: An analytical case study (Peter Sollich and David Barber). Support vector method for function approximation, regression estimation, and signal processing (Vladimir Vapnik, Steven E. Golowich and Alex Smola). The learning dynamics of a universal approximator (Ansgar H.L. West, David Saad and Ian T. Nabney). Computing with infinite networks (Christopher K.I. Williams). Microscopic equations in rough energy landscape for neural networks (K.Y. Michael Wong). Time series prediction using mixtures of experts (Assaf J. Zeevi, Ron Meir and Robert J. Adler).

IV. Algorithms and architecture. Genetic algorithms and explicit search statistics (Shumeet Baluja). Consistent classification, firm and soft (Yoram Baram). Bayesian model comparison by Monte Carlo chaining (David Barber and Christopher M. Bishop). Gaussian processes for Bayesian classification via hybrid Monte Carlo (David Barber and Christopher K.I. Williams). Regression with input-dependent noise: A Bayesian treatment (Christopher M. Bishop and Cazaow S. Qazaz). GTM: A principled alternative to the self-organizing map (Christopher M. Bishop, Markus Svensén and Christopher K.I. Williams). The CONDENSATION algorithm—Conditional density propagation and applications to visual tracking (A. Blake and M. Isard). Clustering via concave minimization (P.S. Bradley, O.L. Mangasarian and W.N. Street). Improving the accuracy and speed of support vector machines (Chris J.C. Gorges and B. Schölkopf). Estimating equivalent kernels for neural networks: A data perturbation approach (A. Neil Burgess). Promoting poor features to supervisors: Some inputs work better as outputs (Rich Caruana and Virginia R. de Sa). Self-organizing and adaptive algorithms for generalized eigen-decomposition (Chanchal Chatterjee and Vwani P. Roychowdhury). Representation and induction of finite state machines using time-delay neural networks (Daniel S. Clouse, C. Lee Giles, Bill G. Horne and Garrison W. Cottrell). 488 solutions to the XOR problem (Frans M. Coetzee and Virginia L. Stonick). Minimizing statistical bias with queries (David A. Cohn). MIMICX: Finding optima by estimating probability densities (Jeremy S. de Bonet, Charles L. Isbell, Jr. and Paul Viola). On a modification to the mean field EM algorithm in factorial learning (A.P. Dunmur and D.M. Titterton). Softening discrete relaxation (Andrew M. Finch, Richard C. Wilson and Edwin R. Hancock). Limitations of self-organizing maps for vector quantization and multidimensional scaling (Arthur Flexer). Continuous sigmoidal belief networks trained using slice sampling (Brendan J. Frey). Adaptively growing hierarchical mixtures of experts (Juergen Fritsch, Michael Finke and Alex Waibel). Balancing between bagging and bumping (Tom Heskes). LSTM can solve hard long time lag problems (Sepp Hochreiter and Jürgen Schmidhuber). One-unit learning rules for independent component analysis (Aapo Hyvärinen and Erkki Oja). Recursive algorithms for approximating probabilities in graphical models (Tommi S. Jaakkola and Michael I. Jordan). Combinations of weak classifiers (Chuanji Ji and Sheng Ma). Hidden Markov decision trees (Michael I. Jordan, Zoubin Ghahramani and Lawrence K. Saul). Unification of information maximization and minimization (Ryotaro Kamimura). Unsupervised learning by convex and conic coding (D.D. Lee and H.S. Seung). ARC-LH: A new adaptive resampling algorithm for improving ANN classifiers (Friedrich Leisch and Kurt Hornik). Bayesian unsupervised learning of higher order structure (Michael S. Lewicki and Terrence J. Sejnowski). Source separation and density estimation by faithful equivariant SOM (Juan K. Lin, Jack D. Cowan and David G. Grier). NeuroScale: Novel topographic feature extraction using RBF networks (David Lowe and Michael E. Tipping). Ordered classes and incomplete examples in claification (Mark Mathieson). Triangulation by continuous embedding (Mariana Meilă and Michael I. Jordan). Combining neural network regression estimates with regularized linear weights (Christopher J. Merz and Michael J. Pazzani). A mixture of experts classifier with learning based on both labelled and unlabelled data (David J. Miller and Hasan S. Uyar). Learning Bayesian belief networks with neural network estimators (Stefano Monti and Gregory F. Cooper). Smoothing regularizers for projective basis function networks (John E. Moody and Thorsteinn S. Rögvaldsson). Competition among networks improves committee performance (Paul W. Munro and Bambang Parmanto). Adaptive on-line learning in changing environments (Noboru Murata, Klaus-Robert Müller, Andreas Ziehe and Shun-ichi Amari). Using curvature information for fast stochastic search (Genevieve B. Orr and Todd K. Leen). Maximum likelihood blind source separation: A context-sensitive generalization of ICA (Barak A. Pearlmutter and Lucas C. Parra). A convergence proof for the softassign quadratic assignment algorithm (Anand Rangarajan, Alan Yuille, Steven Gold and Eric Mjolsness). Second-order learning algorithm with squared penalty term (Kazumi Saito and Ryohei Nakano). Monotonicity hints (Joseph Sill and Yaser S. Abu-Mostafa). Training algorithms for hidden Markov models using entropy based distance functions (Yoram Singer and Manfred K. Warmuth). Clustering sequences with hidden Markov models (Padhraic Smyth). Fast network pruning and feature extraction by using the unit-OBS algorithm (Achim Stahlberger and Martin Riedmiller). Separating style and content (Joshua B. Tenenbaum and William T. Freeman). Early brain damage (Volker Tresp, Ralph Neuneier and Hans Georg Zimmermann). Probabilistic interpretation of population codes (Richard S. Zemel, Peter Dayan and Alexandre Pouget).

V. Implementation. VLSI implementation of cortical visual motion detection using an analog neural computer (Ralph Etienne-Cummings, Jan van der Spiegel, Naomi Takahashi, Alyssa Apsel and Paul Mueller). A spiked based learning neuron in analog VLSI (Philipp Härfliker, Misha Mahowald and Lloyd Watts). An analog implementation of the constant average statistics constraint for sensor calibration (John G. Harris and Yu-Ming Chiang). Analog VLSI circuits for attention-based, visual tracking (Timothy Horiuchi, Tonia G. Morris, Christof Koch and Stephen P. De Weerth). Dynamically adaptable CMOS winner-take-all neural network (Kunihiko Iizuka, Masayuki Miyamoto and Hirofumi Matsui). An adaptive WTA using floating gate technology (W. Fritz Kruger, Paul Hasler, Bradley A. Minch and Christof Koch). A micropower analog VLSI HMM state decoder for wordspotting (John

Lazzaro, John Wawrzynek and Richard Lippmann). Bangs, clicks, snaps, thuds and whacks: An architecture for acoustic transient processing (Fernando J. Pineda, Gert Cauwenberghs and R. Timothy Edwards). A silicon model for amplitude modulation detection in the auditory brainstem (André van Schaik, Eric Fragnière and Eric Vittoz).

VI. Speech, handwriting and signal processing. Dynamic features for visual speechreading: A systematic comparison (Michael S. Gray, Javier R. Movellan and Terrence J. Sejnowski). Blind separation of delayed and convolved sources (Te-Won Lee, Anthony J. Bell and Russell H. Lambert). A constructive RBF network for writer adaptation (John C. Platt and Nada P. Matic). A new approach to hybrid HMM/ANN speech recognition using mutual information neural networks (G. Rigoll and C. Neukirchen). Neural network modeling of speech and music signals (Alex Röbel). A constructive learning algorithm for discriminant tangent models (Diego Sona, Alessandro Sperduti and Antonina Starita). Dual Kalman filtering methods for nonlinear prediction, smoothing and estimation (Eric A. Wan and Alex T. Nelson). Ensemble methods for phoneme classification (Steve Waterhouse and Gary Cook). Effective training of a neural network character classifier for word recognition (Larry Yaeger, Richard Lyon and Brandyn Webb).

VII. Visual processing. Viewpoint invariant face recognition using independent component analysis and attractor networks (Marian Stewart Bartlett and Terrence J. Sejnowski). Learning temporally persistent hierarchical representations (Suzanna Becker). Edges are the "independent components: of natural scenes (Anthony J. Bell and Terrence J. Sejnowski). Compositionality, MDL priors, and object recognition (Elie Bienenstock, Stuart German and Daniel Potter). Learning appearance based models: Mixtures of second moment experts (Christoph Bregler and Jitendra Malik). Spatial decorrelation in orientation tuned cortical cells (Alexander Dimitrov and Jack D. Cowan). Spatiotemporal coupling and scaling of natural images and human visual sensitivities (Dawei W. Dong). Selective integration: A model for disparity estimation (Michael S. Gray, Alexandre Pouget, Richard S. Zemel, Steven J. Nowland and Terrence J. Sejnowski). ARTEX: A self-organizing architecture for classifying image regions (Stephen Grossberg and James R. Williamson). Contour organisation with the EM algorithm (J.A.F. Leite and Edwin R. Hancock). Visual cortex circuitry and orientation tuning (Trevor Mundel, Alexander Dimitrov and Jack D. Cowan). Representing face images for emotion classification (Curtis Padgett and Garrison W. Cottrell). Rapid visual processing using spike asynchrony (Simon J. Thorpe and Jacques Gautrais). Interpreting images by propagating Bayesian beliefs (Yair Weiss). Salient contour extraction by temporal binding in a cortically-based network (Shih-Cheng Yen and Leif H. Finkel).

VIII. Applications. An orientation selective neural network for pattern identification in particle detectors (Halina Abramowicz, David Horn, Ury Naftaly and Carmit Sahar-Pikielny). Adaptive access control applied to ethernet data (Timothy X. Brown). Predicting lifetimes in dynamically allocated memory (David A. Cohn and Satinder Singh). Multi-task learning for stock selection (Joumana Ghosn and Yoshua Bengio). The neurothermostat: Predictive optimal control of residential heating systems (Michael C. Mozer, Lucky Vidmar and Robert H. Dodier). Sequential tracking in pricing financial options using model based and neural network approaches (Mahesan Niranjan). A comparison between neural networks and other statistical techniques for modeling the relationship between tobacco and alcohol and cancer (Tony Plate, Pierre Band, Joel Bert and John Grace). Reinforcement learning for dynamic channel allocation in cellular telephone systems (Satinder Singh and Dimitri Bertsekas). Spectroscopic detection of cervical pre-cancer through radial basis function networks (Kagan Tumer, Nirmala Ramanujam, Rebecca Richards-Kortum and Joydeep Ghosh). Interpolating earth-science data using RBF networks and mixtures of experts (Ernest Wan and Don Bone). Multi-effect decompositions for financial data modeling (Lizhong Wu and John E. Moody).

IX. Control, navigation and planning. Multidimensional triangulation and interpolation for reinforcement learning (Scott Davies). Efficient nonlinear control with actor-tutor architecture (Kenji Doya). Local bandit approximation for optimal learning problems (Michael O. Duff and Andrew G. Barto). Reinforcement learning for mixed open-loop and closed-loop control (Eric A. Hansen, Andrew G. Barto and Shlomo Zilberstein). Multi-grid methods for reinforcement learning in controlled diffusion processes (Stephen Pareigis). Learning from demonstration (Stefan Schaal). Exploiting model uncertainty estimates for safe dynamic control learning (Jeff G. Schneider). Analytical mean squared error curves in temporal difference learning (Satinder Singh and Peter Dayan). Learning decision theoretic utilities through reinforcement learning (Magnus Stensmo and Terrence J. Sejnowski). On-line policy improvement using Monte-Carlo search (Gerald Tesauro and Gregory R. Galperin). Analysis of temporal-difference learning with function approximation (John N. Tsitsiklis and Benjamin Van Roy). Approximate solutions to optimal stopping problems (John N. Tsitsiklis and Benjamin Van Roy). Index of authors. Keyword index.
