

# 2021 IEEE Radio & Wireless Week

## FINAL PROGRAM

### Virtual Conference

17-22 January, 2021

2021 Radio & Wireless Week Sponsors:

- IEEE Microwave Theory and Techniques Society (MTT-S)
- IEEE Aerospace and Electronic Systems Society (AESS)
- IEEE Antennas and Propagation Society (APS)

<http://www.radiowirelessweek.org>

**IEEE**

**AESS**

## Invitation of the General Chair and Co-Chair to the IEEE Radio and Wireless Week

As chair and cochair of IEEE Radio & Wireless Week (RWW) 2021, we would like to welcome you to the virtual series of conferences and events. For this 15th anniversary of RWW, the event will be held "in the cloud" through a virtual platform. Please check the website, [www.radiowirelessweek.org](http://www.radiowirelessweek.org), for updates on the conference and technical program, which will feature great ideas and proposals in wireless technology. We hope we can meet you in person, as we have traditionally, as soon as COVID-19 restrictions are lifted for conference gatherings. In the meantime, we look forward to hosting RWW 2021 virtually and meeting you during the event.

RWW, one of the central meetings for the microwave community, will span 6 days from 17 January to 22 January 2021. Typically, RWW is preceded by, and helps to support, the IEEE International Microwave Symposium Technical Program Review Committee meeting and the IEEE Microwave Theory and Techniques Society (MTT-S) Administrative Committee meetings. This year, there will be five colocated conferences as part of RWW, including the 2021 IEEE Radio and Wireless Symposium (RWS), the 21st Topical Meeting on Silicon Monolithic Integrated Circuits in RF Systems (SiRF), the IEEE Topical Conference on Power Amplifiers for Wireless and Radio Applications (PAWR), the IEEE Topical Conference on Wireless Sensors and Sensor Networks (WisNet), and the IEEE Space Hardware and Radio Conference (SHaRC).

For 2021, we will follow our customary RWW program, with technical papers presented in standard oral sessions. Five workshops (all lasting half a day) are planned for RWW 2021, along with a short course on digital predistortion and a special track on Monday for IEEE Distinguished Microwave Lecturers. We will also, for the first time, present a Women in Microwaves event, bringing together a panel of professionals in microwave engineering. The plenary session will be held Tuesday morning, with our plenary speakers presenting their interesting and inspiring talks. This year, the plenary will focus on laying the groundwork for 6G communications, quantum computing with microwaves, and the winners of the student competitions will be announced. A special area of our "cloud" platform will be dedicated to RWW and Automatic RF Techniques Group (ARFTG) exhibitors, so please take time to visit them to learn more about the latest software and hardware innovations influencing our field.

Following last year's successful colocation with RWW, the 96th ARFTG meeting will again be held during RWW 2021. ARFTG is the premier conference focused on RF, microwave, and millimeterwave measurements, calibration, and uncertainty.

For the fourth year, the MTT-S and RWW Steering Committee are partnering with the multisociety IEEE Internet of Things (IoT) Initiative to host an IoT summit, "The IoT and Wireless Sensing, With Wireless Sensors, in Wireless Sensor Networks." The meeting will bring together participants from industry, academia, and the public sector to explore the latest IoT technology developments and applications.

Always a highlight, the Student Paper Contest is dedicated to supporting and encouraging students to pursue a career in the wireless area. On Monday morning, all finalists will provide an oral "elevator pitch"-style presentation to a group of judges. In addition, a Young Professionals meeting will include several interesting technical talks.

Finally, we would like to recognize and thank all of those on the RWW 2021 Steering Committee for their volunteer time and effort in helping to bring the event to fruition. The Steering Committee members come from all IEEE Regions, giving RWW 2021 a truly international reach and flavor. We hope to see you "in the cloud" for five days of great technical presentations, discussions, and networking.

**RWW2021 General Chair and Co-Chair**  
Nuno Borges Carvalho and Kevin Chuang

General Chair  
Nuno Borges Carvalho

General Co-Chair  
Kevin Chuang

Technical Program Chair  
Alexander Koelpin

## RWW 2021 Steering Committee

### General Chair:

Nuno Borges Carvalho, *Universidade de Aveiro*

### General Co-Chair:

Kevin Chuang, *MaxLinear*

### Technical Program Chair:

Alexander Koelpin, *Hamburg University of Technology*

### Finance Chair:

Changzhi Li, *Texas Tech University*

### RWS Co-Chairs:

Alexander Koelpin, *Hamburg University of Technology*

Markus Gardill, *Julius-Maximilians-University Würzburg*

### Topical Conference SiRF General Chair:

Vadim Issakov, *University Magdeburg*

### Topical Conference PAWR Co-Chairs:

Christian Fager, *Chalmers University*

Vaclav Valenta, *ESA/ESTEC*

### Topical Conference WiSNet Co-Chairs:

Rahul Khanna, *Intel*

Paolo Mezzanotte, *Università degli Studi di Perugia*

### SHaRC Co-Chairs:

Charlie Jackson, *Northrop Grumman*

Holger Maune, *TU Darmstadt*

### Workshops Co-Chairs:

Václav Valenta, *ESA/ESTEC*

Venkata Vanukuru, *GlobalFoundries*

### Distinguished Microwave Lecturers Chair:

Markus Gardill, *Julius-Maximilians-University Würzburg*

### University Track Chair:

Mario Pauli, *Karlsruhe Institute of Technology*

### Student Paper Contest Co-Chairs:

Fabian Lurz, *Hamburg University of Technology*

Holger Maune, *Technical University of Darmstadt*

### Publicity & Publications Co-Chairs:

Roberto Gomez-Garcia, *University of Alcalá*

Glauco Fontgalland, *Univ. Federal de Campina Grande*

Jasmin Grosinger, *Graz Univ. Technology*

### Paper Submission Management Chair:

Spyridon Pavlidis, *North Carolina State University*

### Exhibition/Sponsorships Chair:

Elsie Vega, *IEEE MCE*

### Exhibits/MarCom Liaison:

Robert H. Caverly, *Villanova University*

### Microwave Magazine Special Issue Editor:

Roberto Gomez-Garcia, *University of Alcalá*

### RWW Executive Committee Chair:

Rashaunda Henderson, *University of Texas at Dallas*

### MTT Transactions Mini Special Issue Guest Editors:

Alexander Koelpin, *Hamburg University of Technology*

Fabian Lurz, *Hamburg University of Technology*

### Young Professionals Chair:

Pushkar Kulkarni, *Qualcomm*

### Conference Management:

Elsie Vega, *IEEE MCE*

Deidre Zeigler, *IEEE MCE*

### International Liaison:

Zaher Bardai, *IEEE MCE*

### Webmaster:

Min Hua, *Raysilica*

### RWW Executive Committee Chair:

Dietmar Kissinger, *IHP GmbH*

### At Large (Advisors):

Dietmar Kissinger, *IHP Microelectronics*

Robert H. Caverly, *Villanova University*

Rashaunda Henderson, *University of Texas at Dallas*

Charlie Jackson, *Northrop Grumman*

## The 21<sup>ST</sup> Topical Meeting on Silicon Monolithic Integrated Circuits in RF Systems

### Message from the SiRF General Chair:

#### Welcome to SiRF 2021!

IEEE Topical Meetings on Silicon Monolithic Integrated Circuits in RF Systems (SiRF) have been at the forefront of moving Silicon technologies into microwave and millimeter-wave applications.

This 21st topical meeting will continue the tradition of spanning a wide scope of topics from silicon-based semiconductor technologies, modelling, circuit design techniques and highly-integrated systems, for such applications as automotive radar, 5G communication, consumer electronics and more. The ever-increasing integration trend from a single-transistor towards building blocks and their integration into System-on-Chip (SoC) or System in Package (SiP) is related to the rapid development of silicon-based technologies. Wherever possible, silicon technologies continue to push the boundaries, replacing III-V technologies at all levels of system functionality.

Three days of SiRF 2021 would provide an up-to-date snapshot of the state of the art in RF, microwave and mm-wave silicon-based circuits and will inspire developing new ideas. As in previous years, a lineup of excellent world-class invited speakers will provide an insight on the latest developments of circuits and systems in advanced CMOS and an BiCMOS technologies and will give an overview on latest research directions in this field.

Vadim Issakov  
SiRF 2021 Conference Chair

## Power Amplifiers for Radio and Wireless Applications (PAWR)

Interest in power amplifier technology remains at an all time high because of the emergence of new device materials such as GaN that offer improved performance, and the need for ever greater linearity and efficiency by the world's expanding wireless communication infrastructure. Topical Conference on Power Amplifiers for Wireless and Radio Applications (PAWR) will feature power amplifier focused sessions, including the latest advances on power amplifier technology, efficiency enhancement techniques, system analysis, modeling, distortion reduction, an interactive workshop answering questions on power amplifier linearization and efficiency enhancement.

### Technical Program Committee:

#### Distortion Reduction Techniques in RF Power Amplifiers

Juan A. Becerra	Yunfan Chen
Kevin Chuang	Armando Cova
Pere L. Gilibert	Allen Katz
Peter Kenington	Anding Zhu

#### High Efficiency RF Power Amplifiers

Taylor Barton	Paolo Enrico de Falco
José A. Garía	William Hallberg
Wolfgang Heinrich	Song Lin
Chao Lu	Morten Olavsbraaten
Frederick Raab	David Runton
Ali Tombak	Kefei Wu

#### Power Amplifier Modeling and System Analysis

Florinel Balteanu	Filipe Barradas
Vittorio Camarchia	Robert Caverly
Paolo Colantonio	Nathalie Deltimple
Murat Eron	Christian Fager
Marcn Franco	Gary Hau
Ming Ji	Bumman Kim
Chang-Ho Lee	Donald Lie
Stephen Maas	José Pedro
Zoya Popovic	Francesc Purroy
Roberto Quaglia	Patrick Roblin
Tushar Sharama	

## IEEE Space Hardware and Radio Conference (IEEE SHaRC)

The IEEE Space Hardware and Radio Conference (IEEE SHaRC) addresses new concepts, novel implementations as well as emerging applications for space-based hardware for communications, earth observation, and other novel disruptive services. To meet recent needs, there has been a renaissance of interest and investment in space- and suborbital-based systems especially for high-data-rate communications networks. These new global satellite networks are disruptive, and many applications are feasible: e.g. the creation of a worldwide car-to-car communications network or global sensor & control systems for autonomous vehicles. The IEEE Space Hardware and Radio Conference provides a forum for discussions on this new frontier.

### Technical Program Committee:

#### Applications

Jan Budroweit  
Nuno Carvalho  
Rudy Emrick  
Ramesh Gupta  
Holger Maune  
Steven Reising  
Steven Rosenau  
Thomas Royster  
Klaus Schilling  
Rick Sturdivant

#### Hardware and Electronics

Goutam Chattopadhyay  
Markus Gardill  
Jasmin Grosinger  
Charlie Jackson  
James McSpadden  
Thomas Ussmueller  
Václav Valenta  
Robert Weigel

## Wireless Sensors and Sensor Networks (WiSNet)

WiSNet is dedicated to the advancement of wireless sensors for commercial and industrial applications and will be held to specifically focus on the latest developments in these areas of RF Sensors and Sensor Networks. Wireless sensors and sensor networks are critical system components for applications such as: manufacturing, monitoring, safety, positioning, tracking and many others; more generally, they are key elements in the physical layer of Internet of Things eco-system. This year, WiSNet2021 will focused on the latest developments in these areas including sensors and smart sensor networks ranging from UHF, RFID applications to millimeter-wave radar systems and six-port technology. Some emerging topics will be also covered this year, such as Internet of Things hardware, protocols and applications, and wireless sensors applications in wearable computing.

### Technical Program Committee:

#### IoT Hardware, Protocols and Applications

J-C Chiao	Georg Fischer
Nils Pohl	Luca Roselli

#### Six Port and Multi-port Technology

Serioja Tatu

#### Wireless Integrated Sensors, Front-Ends, and Building Blocks

Diego Masotti	Holger Maune
Luciano Tarricone	

#### Wireless Sensors For Communication, Radar, Positioning and Imaging Applications

Federico Alimenti	Alessandra Costanzo
Spiridon Daskalakis	Amr Fahim
Reinhard Feger	Arne Jacob
Alexander Koelpin	Tuami Lasri
Valentina Palazzi	Thomas Ussmueller
Huei Wang	

#### Wireless Sensors for Harsh Environments, Environmental, Health, Home and Commercial Applications

Xianming Qing	Manos Tentzeris
---------------	-----------------

#### Wireless Sensors for Localization, Tracking, and RFID Technologies

Zahir Alsulaimawi	Marco Dionigi
Rahul Khanna	Huaping Liu
Paolo Mezzanotte	Mario Pauli
Hendrik Rogier	Jennifer Williams

#### Wireless Sensors Networks, Smart Sensor Systems, and Autonomic Networking

Maurizio Bozzi	Kamal Samanta
----------------	---------------

# Technical Program for 2021 Radio & Wireless Week (RWW)

SUNDAY, 17 JANUARY 2021 (9:30-17:30 ET)

<p style="text-align: center;"><i>Workshop</i></p> <p style="text-align: center;"><b>6G Research: Challenges and opportunities</b></p>	<p style="text-align: center;"><i>Workshop</i></p> <p style="text-align: center;"><b>5G Power Amplifiers</b></p>	<p style="text-align: center;"><i>Workshop</i></p> <p style="text-align: center;"><b>Reflectionless Filters</b></p>	<p style="text-align: center;"><i>Workshop</i></p> <p style="text-align: center;"><b>Modeling and Design Tools for Accelerated Design of 5G GaN PAs</b></p>
<p><b>Organizers:</b> Young-Kai (Y.K), <i>DARPA, USA</i> Daquan Huang, <i>Samsung, USA</i></p> <p><b>Abstract:</b> Efficiency and linearity are key features in order to greatly increase the data rate, mm-wave 6G must embrace element level digital beamforming in order to achieve the performance of sub-6 GHz links. However, the wider bandwidth at mm-wave frequencies (400 MHz, 800 MHz, 1200 MHz), and the much smaller space available per unit cell, results in formidable challenges for mm-wave digital beamforming arrays. Along with many other aspects related to 6G, this workshop will discuss the advances in ADCs, PAs and transceivers required to achieve digital beamforming for 6G.</p>	<p><b>Organizers:</b> Hua Wang, <i>Georgia Tech, USA</i></p> <p><b>Abstract:</b> The growing demand for high data rate, longer battery life and low latency is pushing the transition from 4G Long-Term Evolution (LTE) to 5G. There is a partition of the 4G/5G RF systems using advanced low feature nodes for 4G/5G modems and transceivers and the other RF and analog functions being integrated into several Front End Modules (FEMs). The FEMs will integrate power amplifiers, switches, couplers, tuners and active acoustic filters. These will cover more than 50 LTE bands from 600MHz to 6GHz as well mmWave. The workshop will cover practical design aspects for 5G FEMs with emphasis for power amplifiers as well the technologies involved into these designs.</p>	<p><b>Organizers:</b> Shahrokh Saeedi, <i>Boeing, USA</i> Charlie Jackson, <i>Northrop Grumman Cooperation, USA</i></p> <p><b>Abstract:</b> Filters are fundamental signal processing electric components and therefore are crucial building blocks in modern RF/wireless systems. Filters are frequency-selective networks, which are used to remove undesirable-frequency portions of input signals that do not fall within their passband. All filters, ideally, behave like transparent networks to signals with frequency components inside their passband(s). However, not all filters act similarly in their stopband(s). Reflectionless filters are a class of networks which ideally exhibit like always-matched circuits at all ports and at all frequencies. In reflectionless filters, input signals are transferred to another port if they fall inside the passband(s) or are absorbed if appear inside the stopband(s). Hence, all ports' reflection coefficients are always zero. This has led to a resurgence of modern development efforts in absorptive filtering that spans a wide range of approaches and technologies. This workshop review the basics of reflectionless filters and provide examples of recent developments.</p>	<p><b>Organizer:</b> Nicholas Miller, <i>Air Force Research Laboratory, USA</i></p> <p><b>Abstract:</b> This workshop will review advances in the nonlinear device modeling and characterization of GaN HEMTs to support the accelerated design of 5G base stations. Both the extraction of ASM-HEMT and MIT Source based model will be discussed. Comparison of measurements with NVNA large-signal measurement results will be reported. Characterization and modeling of traps will be discussed. Finally an embedding ASM-HEMT model for the accelerated design of GaN PAs will be presented.</p>
<p><b>Talks and Speakers:</b></p> <p><b>Digital Beamforming for 6G: Much More than THz Links</b> Gabriel M. Rebeiz, <i>University of California San Diego</i></p> <p><b>Terahertz for 6G: Opportunities and Challenges</b> Gary Xu, <i>Samsung Research</i></p> <p><b>Emerging AI Processing for 6G Radios</b> Young-Kai (Y.K), <i>DARPA</i></p> <p><b>100-300GHz Wireless: Transistors, ICs, Packages and Systems</b> Mark Rodwell, <i>University of California Santa Barbara</i></p> <p><b>Bridging the Gap between Antennas and AI - a 6G Vision</b> Bodhisatwa Sadhu, <i>IBM T.J. Watson Research</i></p>	<p><b>Talks and Speakers:</b></p> <p><b>Sub-6GHz 5G Front End Modules for Cellular Applications</b> Florinel Balteanu, <i>Skyworks</i></p> <p><b>Power Amplifiers for 5G mmwave and Automotive Radar</b> Shafi Syed, <i>GLOBALFOUNDRIES</i></p> <p><b>Recent Advances in Microwave Power Amplifiers</b> Howard Hausman, <i>RF Microwave Consulting Services, Hofstra University</i></p> <p><b>Pre-Layout Electro-Thermal Co-Simulation for Accurate Estimation of Thermal Coupling in Power Amplifiers</b> Ted Anderson, <i>GLOBALFOUNDRIES</i></p>	<p><b>Talks and Speakers:</b></p> <p><b>TBA</b> Matt Morgan, <i>National Radio Astronomy Observatory</i></p> <p><b>Avoiding RF Isolators: Reflectionless Microwave Filtering Components for Advanced RF Front-Ends</b> Roberto Gomez-Garcia<sup>1</sup>, Dimitra Psychogiou<sup>2</sup>, <sup>1</sup><i>University of Alcalá</i>, <sup>2</sup><i>University of Colorado Boulder</i></p> <p><b>TBA</b> Juseop Lee, <i>Korea University</i></p>	<p><b>Talks and Speakers:</b></p> <p><b>Physics-based Compact Modeling of Charge Transport in Ultra-Scaled GaN HEMTs for RF Applications</b> Shaloo Rakheja, <i>University of Illinois</i></p> <p><b>From Poisson Equation to Power Amplifiers: Accurate Non-linear RF Models for GaN with Physics-based ASM-HEMT compact model</b> Sourabh Khandelwal, <i>University of Florida</i></p> <p><b>GaN HEMT Modeling for RF Applications using Advanced Circuit Extraction Tools and Fermi Kinetics Transport</b> Nicholas Miller, <i>Air Force Research Laboratory</i></p> <p><b>ASM-HEMT Embedding Model for Accelerated Design of PAs</b> Miles Lindquist, P. # Technical Program for 2021 Radio & Wireless Week (RWW)

SUNDAY, 17 JAN, 2021 (9:30-17:30 ET)

## Workshop

### Technology for CubeSats and COTS for Space

#### Organizers:

TBA

#### Abstract:

CubeSats contributed significantly to the success of "New Space" by setting standards in dimensions, as well as a more recent effect by defining electrical interface standards. By this way launcher adaptors, as well as subsystems or components from different suppliers can be used and integrated at limited efforts. Thus a broad spectrum of parts is available to the CubeSat community and developers can focus on their specific specialties.

CubeSats typically employ commercial of the shelf (COTS) components, taking advantage of most recently technology innovations and extreme miniaturization. Nevertheless, this cannot be done in a naïve way, as the unavoidable space radiation affects the electronics. Appropriate means need to be implemented in order to guarantee required availability and lifetime for the satellites. Here redundancy concepts in combination with fault detection, identification and recovery (FDIR) algorithms based on advanced filtering and control methods are supporting implementation of a reliable system, compensating the higher noise susceptibility of miniaturized systems.

Nowadays functionalities like orbit control by miniature propulsion systems and precise attitude control become available at CubeSat level. This enables data acquisition via distributed, networked sensor systems self-organized in a formation. Related technologies used (relative navigation, inter-satellite links, etc.) and technology perspectives enabled by such formations will be outlined.

#### Talks and Speakers:

##### Technology for CubeSats and COTS for Space

Klaus Schilling, *Robotics and Telematics at University Würzburg*

FRIDAY, 22 JAN. 2021 (8:00-9:45 ET)

## Short Course

### Digital Predistortion

#### Organizer:

Kevin Chuang, *MaxLinear, MA, USA*

#### Instructors:

Juan A. Becerra, *María J. Madero-Ayora, Universidad de Sevilla, Spain*

#### Abstract:

In this short course, the fundamentals underlying the digital predistortion (DPD) concept are explained. It will be shown how the nonlinearities present in communication systems produce both in-band and out-of-band distortion that degrades their performance. This effect will be reviewed in time, frequency, and constellation domains of modulated signals along with commonly employed linearity indicators such as the normalized mean square error, adjacent channel power ratio and error vector magnitude. An important number of modern wireless communication standards employ spectrally efficient modulation schemes such as the orthogonal frequency division multiplexing (OFDM). The generation and demodulation of OFDM signals will be discussed and the challenges posed by their high peak-to-average power ratio will be illustrated. The representation of nonlinear systems with memory by means of the Volterra series will be introduced, involving scenarios for the modeling of a power amplifier and also for its linearization through DPD. In order to train the DPD, two possible architectures will be compared: the indirect learning architecture and the direct learning architecture. The construction of widely-used models as the memory polynomial and generalized memory polynomial will be examined together with the regression of models to identify their coefficients. Based on them, we can exemplify how rapid the number of coefficients grows as the nonlinear order and memory depth are increased, a problem referred to as the curse of dimensionality. This leads to the idea of pruning the model structures in order to reduce their complexity, for which a priori or a posteriori approaches can be followed. Through the a posteriori pruning approach, several coefficient selection techniques that exploit the sparsity in the regression process will be analyzed to provide a reduced-order model with equivalent accuracy. Throughout this short course, the explanations will be covered theoretically and with sample code to provide practical hands-on experience.

#### Course Syllabus:

-Basics of nonlinearities: effects in time, frequency and constellation domains.

-Orthogonal frequency division multiplexing (OFDM) signals generation. Volterra series in power amplifier (PA) modeling.

-Volterra series and digital predistortion (DPD). Indirect learning (ILA) and direct learning (DLA) architectures.

-Basic models: the memory polynomial (MP) and the generalized memory polynomial (GMP).

-Fundamentals of Volterra models: the curse of dimensionality, regression, and a priori versus a posteriori pruning.

-Coefficient selection techniques.

# Technical Program for 2021 Radio & Wireless Week (RWW)

MONDAY, 18 JANUARY 2021 (8:00-11:00 ET)

## Disitinguished Mirowave Lecture Talk 1

### Chip-Scale Wave-Matter Interactions at RF-to-Light Frequencies: Circuits, Systems and Applications

**Speaker:**  
Ruonan Han, MIT, USA

#### Abstract:

Traditional electromagnetic (EM) spectral sensors using integrated circuit technologies (e.g. automotive radars, security imagers, cameras, etc.) are normally based on remote wave scattering or absorption by macroscopic objects at remote distance; the operations are also not selective in wave frequencies. In the past couple of years, a new paradigm of chip-scale EM spectral sensing emerges with features complementary to the above: they utilize various modalities of interactions between EM waves with high-precision frequency control and microscopic particles (molecules, atoms, etc.) with close proximity to the chip. This progress is enabled by the recent advances of silicon devices and processes, as well as the extension of circuit operation frequencies into the terahertz regime. Chip-scale sensing and metrology systems with new capabilities, higher performance and unprecedented affordability now become possible. Examples include THz gas spectroscopy sensors, on-chip "atomic-clock-grade" frequency references, room-temperature CMOS-quantum magnetometers, etc. This talk will present the basic physics of the some wave-matter interactions, key enabling technologies, as well as the designs and prototypes of a few chip systems in the category described above. We will also discuss their potential applications in bio- chemical analysis, wireless networks, PNT (positioning, navigation & timing), security and so on.

## Disitinguished Mirowave Lecture Talk 2

### Fast Solvers for Electromagnetics-Based Analysis and Design of Integrated Circuits and Systems

**Speaker:**  
Dan Jiao, Purdue University, USA

#### Abstract:

The design of advanced integrated circuits and microsystems from zero to terahertz frequencies calls for fast and accurate electromagnetics-based modeling and simulation. The sheer complexity and high design cost associated with the integrated circuits and microsystems prevent one from designing them based on hand calculation, approximation, intuition, or trial and error. The move towards higher frequencies and heterogeneous technologies stresses the need even more. However, the analysis and design of integrated circuits and microsystems impose many unique challenges on electromagnetic analysis such as exponentially increased problem size and extremely multiscaled system spanning from nano- to centi-meter scales. Prof. Jiao will present recent advances in fast solvers to tackle these challenges.

## Disitinguished Mirowave Lecture Talk 3

### Silicon-based Millimeter- wave Phased Arrays for 5G: Fundamentals to Future Trends

**Speaker:**  
Bodhisatwa Sadhu, IBM T. J. Watson,  
USA

#### Abstract:

5G cellular communications use millimeter-wave phased arrays to achieve high data rates and low latency. The majority of the 5G millimeter-wave infrastructure will be partially or completely based on silicon technology. This talk will discuss key aspects of silicon-based millimeter-wave phased-array module design and characterization. It will cover fundamentals of phased arrays, provide an overview of phased array antenna modules using silicon technology, and take a deep dive into an example 5G phased array antenna module. The talk will end with a peek into the future of 5G directional communications.

## Disitinguished Mirowave Lecture Talk 4

### Towards Universally Programmable Chip-scale THz Source, Sensors and Systems: Bridging the THz and Application gap in the Next Decade

**Speaker:**  
Kaushik Sengupta, Princeton University,  
USA

#### Abstract:

Silicon-based Terahertz systems is a field that is only about a decade old. In this time, we have seen a phenomenal growth of silicon systems operating at THz frequencies for a wide range of applications in sensing, imaging and communication. It can be argued that both the 'THz gap' and the 'technology and applications gap' is closing in meaningful ways in the THz range. Technologies beyond 100 GHz focusing on sensing, imaging and wireless back-haul links are getting attractive as we enter into a new area of highly dense network of autonomous systems requiring ultra-high speed and reliable links.

In order to move beyond this inflection point as Moore's law continue to slow, I will discuss why we need to look beyond the classical 'device'-level metrics of efficiency and sensitivity of THz sources and detectors towards holistic 'system' level properties such as scalability and programmability. Such properties are critically important for applications in sensing and imaging, as evidenced across sensor fusion technologies across mmWave, IR and optical frequencies. The ultimate programmability in THz sources and sensors is one that can synthesize or receive THz fields with arbitrary configuration and spectrum. In this talk, I will highlight approaches that cut across electromagnetics, circuits, systems and signal processing, to allow for such reconfigurability in THz signal synthesis and sensing, yet realized with devices that are themselves not very efficient. Particularly, we will demonstrate approaches to THz CMOS sensors reconfigurable across the three field properties of spectrum (100 GHz-1000 GHz), beam pattern and polarization, programmable THz metasurfaces with CMOS tiling, and enabling dynamic spectrum shaping and physically secure sub-THz links.

**SUN. 17 January**

**MTT/ARFTG Event  
Women in Microwaves**

**Starting Time: 10:00 ET**

**Moderator/Organizer:**

Jasmin Grosinger, *Graz University of Technology*

**Abstract:**

At the Women in Microwave (WIM) event, we will put the spotlight on distinguished women in microwaves, who advanced the field of Microwaves Theory and Techniques and the field of Automatic Radio Frequency Techniques considerably.

Distinguished women in microwaves will give a review talk of the specific research topic they are working in and advancing. From today's view, the following distinguished women in microwaves will present their research:

**Presenters:**

**High-Efficiency Amplifiers for Broadband High-PAR Signals**

Zoya Popovic, *University of Colorado Boulder*

**Energy-Autonomous Localization and Tracking**

Alessandra Costanzo, *University of Bologna*

**Metrology for Over-the-Air Tests: Extending the Traceability Path**

Kate Remley, *National Institute of Standards and Technology*

**Emerging Developments on Integrated SWIPT Receivers**

Dominique Schreurs, *KU Leuven*

**IEEE T-MTT  
Mini-Special Issue  
Announcement!**

**Calling all authors!**

The IEEE Transactions on Microwave Theory and Techniques (IEEE T-MTT) will publish a Mini-Special Issue devoted to the IEEE RWW 2021 Conferences (RWW 2021), tentatively scheduled for the November 2021 issue. Authors of all papers relevant to topics of interest of T-MTT presented at the RWW 2021 Conferences are invited to submit an expanded version of their papers to the Mini-Special Issue. The expanded version requires that the new technical content includes a more in-depth treatment, new results beyond the RWW 2021 paper, or both. More details in <https://mtt.org/>

**Expected publication:  
November 2021**

**MON.-SAT.  
11-16 January**

**Co-Located IoT Summit**

**"Wireless Sensing, with  
Wireless Sensors, in  
Wireless Sensor Net-  
works for IoT Applica-  
tions (WS3NI)"**

**A Six-Day Virtual Event**

The 4th IEEE Internet of Things (IoT) Vertical and Topical Summit at RWW2021 addresses the important and crucial role that wireless devices play in the IoT ecosystem. The Summit is sponsored by MTT and by the multi-society IEEE IoT Initiative. The focus for the Summit is: "Wireless Sensing, with Wireless Sensors, in Wireless Sensor Networks for IoT Applications (WS3NI)". This year's theme emphasizes three aspects that are unique to wireless devices: (1) their use as sensors and consequently as the primary source of data for analytics in IoT applications and solutions; (2) their use as means of communications that allows the data and information, in either its raw or reduced form, to connect to computing, storage, and analysis platforms, as well as the return communications for executing actionable responses in the IoT control or decision cycle; and (3) the exploitation of networking for co-operative collection and analysis of data from a large number of sensors to create a more comprehensive situational view and understanding of conditions important for specific IoT applications.

**WED. 20 January**

**Young Professionals Panel  
Session**

**Time: 09:45 – 11:30 ET**

**Moderator/Organizer:**

Pushkar Kulkarni, *Qualcomm*

With advancements in algorithms and technology, artificial intelligence (AI) and machine learning (ML) has found its way in abundance in practical applications. At RWW however, we will be focusing on how AI/ML techniques are becoming increasingly popular in RF/Microwave System Design and Signal Processing. Mark your program book, tell your friends, and join the RWW2021 Young Professionals session to learn about these exciting topics and opportunities that lie ahead. Please check the website for more information. [YoungProfessionalssessionisfreeforIEEE/MTT-SMembers.](https://www.ieee.org/conferences/young-professionals)

**Guest Speakers :**

**A Signal Processing Perspective on Modern Machine Learning and Neural Networks**  
M. Pilianci, *Stanford University*

**Intelligent RF System Design using Artificial Intelligence**  
R. Gentile, *Mathworks*

**Artificial Intelligence and Machine Learning for Wireless Communications**  
J. Kumar Sundararajan, *Qualcomm*

**Machine Learning for Automotive RADAR Detection**  
S. Carpenter, U. Chipengo, *Ansys*

**Solving 5G Issues using Artificial Intelligence and Machine Learning**  
C. Mueh, *Keysight*

**MON.-FRI.  
18-22 January**

**Co-Located Conference**

**96<sup>th</sup> ARFTG  
Microwave Measurement  
Symposium**

**A Four-Day Virtual Event**

Out of an abundance of caution amid the ongoing COVID-19 pandemic, the ARFTG Microwave Measurement Symposium takes place on 18th-22nd of January 2021 as a virtual event and is co-located with Radio and Wireless Week

How is ARFTG-96th different from other conferences? All regular presentations will be available for registered attendees a week in advance for viewing at your own convenience. All accepted submissions are presented in oral format. You will have an opportunity to interact with paper authors during live Q&A session scheduled during conference week.

Conference Invited Talks will be live-streamed and Panel Session will be a live event. Do not forget about NIST/ARFTG Short Course and the joint ARFTG/RWW Workshop as well as NVNA and On-Wafer User's Forum's which are key parts of ARFTG-96th Symposium Week.

**Abbreviated Program  
on page 19**

**MON. 18 January**

**Joint RWW Student  
Paper Contest (Live)**

**Time: 09:45 – 11:15 ET**

**Student Paper Contest Chairs:**

Fabian Lurz, *Hamburg University of Technology*  
Holger Maune, *Technical University of Darmstadt*

The RWW Student Paper Contest provides students with the opportunity to share their work and discuss their results with experts from industry and academia. The contest is open to all students attending the RWW and presenting a paper at one of the topical conferences (RWS, PAWR, WISNet, SiRF, and SHARC). Beginning in 2017, the RWW Steering Committee established a new format for the contest, making it a single event for the whole RWW. The finalists will be chosen from all the submitted student papers, and the two best papers representing the entire RWW will be awarded. All finalists will give a five-minute elevator pitch in the live RWW Student Paper Contest Session (Monday, January 18th, 2021, 09:45 – 11:15 ET) and will also present their work in their regular session. Judges will grade the papers and presentations in the following areas: novelty of the research, quality of the oral presentation, quantity and quality of the information presented, preparedness of the presenter and the student's performance in the live Q&A round after the elevator pitch. The two best student papers representing the entire RWW will be awarded at the Plenary Session, which takes place on Wednesday.

**Student Paper Finalists:**

**TH1A-1** RFID Tattoo for COVID-19 Temperature Measuring

**TH1A-4** Communication-Less Receiver-Side Resonant Frequency Tuning Method for Magnetically Coupled Wireless Power Transfer Systems

**TH2D-2** Massive-MIMO and Digital mm-Wave Arrays on RF-SoCs using FDM for M-Fold Increase in Antennas per ADC/DAC

**TH1D-2** S-Band Low Earth Orbit Reconfigurable Small Satellite System for Space Environment Sensing

**TH1D-4** Wireless Payload Thermal-Vacuum Testing for Lunar Harsh Environment

**TH2C-1** Hand Gesture Recognition Using FMCW Radar in Multi-Person Scenarios

**TU1B-4** A Mm-Wave Gm-Assisted Transformer-Based Matching Network 2x2 Phased-Array Receiver for 5G

**TU1D-3** A Compact Monostatic Transceiver Topology Using a Diode-Based Mixer

**TU2A-3** An Anti-Interference System for Stationary and Moving Interferers

**TU2A-4** Dynamic Range Requirements of Digital vs. RF and Tiled Beamforming in mm-Wave Massive MIMO

**TU2B-1** A Low-Power Duty-Cycled Impulse-Radio Ultrawideband (IR-UWB) Transmitter with Bandwidth and Frequency Reconfigurability Scheme Designed in 180 nm CMOS Process

**TU2C-4** FPGA Implementation of Memory-Based Digital Predistorters with High-Level Synthesis

**WE2A-3** Spoofing Attacks to Radar Motion Sensors with Portable RF Devices

**WE2D-4** MMIC GaAs X-band Isolator with Enhanced Power Transmission Response

**WE2E-2** Experimental Extraction of Thermal Noise y Factors in a 14-nm RF FinFET technology

WEDNESDAY, 20 JANUARY 2021

Joint RWW/ARFTG Plenary Session

Time: 8:00 - 9:45 ET

**Laying the Groundwork for 6G Communications**

**Abstract:** With the deployment of 5G accelerating, it is essential to lay the groundwork for 6G now. In this talk we will explore some of the megatrends driving the need to 6G, as well as some of the unique opportunities that 6G will enable. We will also review the need for coordination between WLAN, 6G and LEO communication to create the seamless, ubiquitous and secure communications network of the future. As the spectrum for 6G data rates is likely to extend beyond 100GHz, we will also review semiconductor device performance for 100GHz-300GHz networks, with a focus on advance SiGe and fully-depleted SOI technologies.

**Peter Gammel, CTO, MWI Business Unit, GlobalFoundries**

Peter Gammel is vice president and CTO of the Mobile and Wireless Infrastructure BU at GlobalFoundries. He joined the company in 2019. Previously, he was the chief technology officer for Skyworks Solutions, Inc. and also served as chief technology officer and vice president of engineering at SiGe. Prior to this, he was vice president of engineering at Renaissance Wireless and chief technology officer at Advance Nanotech and for Agere Systems' Analog Products Business. He was also a distinguished member of technical staff at Alcatel-Lucent Bell Labs.

Gammel received a bachelor of science in physics and mathematics from Massachusetts Institute of Technology and a Ph.D. in physics from Cornell University.

**Quantum Computing with Microwaves**

**Abstract:** Quantum computing offers the potential for an exponential speed-up of certain classes of computational problems, and, as such, the development of a practical quantum computer has been a field of intense research over the past two decades. Yet, it is still early in the development of these systems, as we have just reached the point at which laboratory experiments have shown that quantum computers can outperform classical computers at certain computational tasks. As such, it is an exciting time in the field, analogous to the early days of classical computer development. As microwave engineers there is a tremendous opportunity to contribute to the field, as the control and measurement of most quantum processors is carried-out using microwave techniques. In this talk, I will describe the use of microwaves in quantum computing, with a focus on the superconducting qubit technology which was used to show that a quantum computer is capable of post-classical computation. The talk will be geared toward microwave engineers with no background in quantum computing and will provide a glimpse into the fundamentals, contemporary system architectures, recent experiments, and, finally, major microwave challenges that must be overcome if fault tolerant quantum computing is to become a reality.

**Joseph Bardin, University of Amherst**

Joseph Bardin received the PhD degree in electrical engineering from the California Institute of Technology in 2009. In 2010, he joined the department of Electrical and Computer Engineering at the University of Amherst, where he is currently a Full Professor. His research group currently focuses on low temperature integrated circuits with applications in radio astronomy and the quantum information sciences. In 2017, he joined the Google Quantum AI team as a visiting faculty researcher and, in addition to his university appointment, he currently serves as a staff research scientist with this team. Professor Bardin was a recipient of a 2011 DARPA Young Faculty Award, a 2014 NSF CAREER Award, a 2015 Office of Naval Research YIP Award, a 2016 UMass Amherst College of Engineering Barbara H. and Joseph I. Goldstein Outstanding Junior Faculty Award, a 2016 UMass Amherst Award for Outstanding Accomplishments in Research and Creative Activity, and a 2020 IEEE MTT-S Outstanding Young Engineer Award.

**RWS Session: TU1A**

**Antennas 1: Design & Analysis**

Chair: Glauco Fontgalland, *Federal University of Campina Grande*  
Co-Chair: Jasmin Grosinger, *Graz University of Technology*

**Time: 8:00-9.15 ET**

**RWS Session: TU1B**

**Circuits & Systems 1: mmW and Above**

Chair: Sergio Pacheco, *NXP*  
Co-Chair: TBA

**Time: 8:00-9.30 ET**

**PAWR Session: TU1C**

**Power Amplifier Technology and Linearization 1**

Chair: José C. Pedro, *Universidade de Aveiro*  
Co-Chair: Pere Gilibert, *Universitat Politècnica de Catalunya*

**Time: 8:00-9.25 ET**

**SIRF Session: TU1D**

**mm-Wave Integrated Radar Sensors**

Chair: Roe Ben-Yishay, *ON Semiconductor*  
Co-Chair: TBA

**Time: 8:00-9.10 ET**

**TU1A-1 3D-printed High-Directivity H-plane Horn Antenna with High Front-to-Back Ratio Using Soft and Hard Walls**

M. R. Naeini, D. van der Weide, *University of Wisconsin-Madison, WI, USA*

**TU1B-1 A Monolithic-Integrated Broadband Low-Noise Optical Receiver with Automatic Gain Control in 0.25µm SiGe BiCMOS**

G. Dziallas<sup>1,2</sup>, A. Fatemi<sup>1</sup>, A. Malignaggi<sup>1</sup>, G. Kahme<sup>1</sup>, *IHP – Leibniz-Institut für innovative Mikroelektronik, Germany, Brandenburg Technical University Cottbus, Germany*

**TU1C-1 Linearization for Wireless: Challenges and Opportunities (Invited Talk)**

K. Chuang, *MaxLinear, MA, USA*

**TU1D-1 MM-Wave Radar Systems on Silicon Chip: Principles, Waveforms, Realisations and Applications (Invited Paper)**

C. Vaucher<sup>1,2</sup>, Alexander Yarovoy<sup>1</sup>, *Delft University of Technology, The Netherlands, NXP Semiconductors, The Netherlands*

**TU1A-2 A Gain-Reconfigurable and Frequency-Beam-Steerable Additively Manufactured Antenna**

C. R. Mejias-Morillo, S. LeBlanc, E. A. Rojas-Nastrucci, *Embry-Riddle Aeronautical University, FL, USA*

**TU1B-2 A Compact, Single-Supply, DC to 30 GHz GaAs Active Input Match MMIC**

G. Lasser, *University of Colorado Boulder, CO, USA*

**TU1C-2 Mixture of Experts Approach for Behavioral Modeling of RF Power Amplifiers**

A. Brihuega<sup>1</sup>, M. Abdelaziz<sup>2</sup>, L. Anttila<sup>1</sup>, Y. Li<sup>3</sup>, A. Zhu<sup>3</sup>, M. Valkama<sup>1</sup>, *Tampere University, Finland, Zewail City of Science and Technology, Egypt, University College Dublin, Ireland*

**TU1D-2 Low-Power 60 GHz Receiver with an Integrated Analog Baseband for FMCW Radar Applications in 28 nm CMOS Technology**

R. Ciocoveanu<sup>1</sup>, V. Issakov<sup>1,2</sup>, *Infineon Technologies AG, Germany, Otto-von-Guericke University, Germany*

**TU1A-3 Generalized Technique for Radiation Pattern Modeling of Multibeam Conformal Patch Array Antennas**

T. Tang<sup>1</sup>, G.R. Branner<sup>1</sup>, Hung Tra<sup>1</sup>, B. Preetham Kuma<sup>2</sup>, *University of California Davis, CA, USA, California State University Sacramento, CA, USA*

**TU1B-3 A 60-GHz Receiver Frontend With Gain-Linearity Tuning for FMCW Radar Applications**

H. Ghaleb, A. Ferschischi, N. Joram, F. Ellinger, *Technische Universität Dresden, Germany*

**TU1C-3 A Bivariate Volterra Series Approach to Modeling and Linearization of Power Amplifiers**

C. Crespo-Cadenas, M. J. Madero-Ayora, J. A. Becerra, *Universidad de Sevilla, Spain*

**TU1D-3 A Compact Monostatic Transceiver Topology Using a Diode-Based Mixer (Student Paper Finalist)**

B. Sene<sup>1,2</sup>, H. Knapp<sup>1</sup>, D. Reiter<sup>1,2</sup>, N. Pohl<sup>2</sup>, *Infineon Technologies AG, Germany, Ruhr-University Bochum, Germany*

**TU1A-4 Non-Foster Matching Circuit Synthesis Using Artificial Neural Networks**

Q. Li, T.-Y. Shih, *University of Idaho, ID, USA*

**TU1B-4 A Mm-Wave Gm-Assisted Transformer-Based Matching Network 2x2 Phased-Array Receiver for 5G Communication and Radar System (Student Paper Finalist)**

K.-D. Chu, J. C. Rudel, *University of Washington, WA, USA*

**TU1C-4 Dataset Reduction for Neural Network Based Digital Predistorters under Strong Nonlinearities**

D. López-Bueno, P. L. Gilibert, G. Montoro, *Universitat Politècnica de Catalunya, Spain*

**TU1A-5 Wideband Beam-Steerable Cylindrical Lens Antenna with Compact Integrated Feed Elements**

S. Shad, H. Mehrpouya, *Boise State University, ID, USA*

**TU1B-5 Comprehensive Physics-Based Model for Millimeter-Wave Transistor**

S. Nouri, S. M. El-Ghazaly, *University of Arkansas, AR, USA*

**TU1B-6 Noise Cancelling LNAs for Millimeter Wave Applications**

M. Ghanevati, T. LaRocca, M. Trippett, *Northrop Grumman, CA, USA*

RWW2020 Interactive Session- Courtesy of Lyle Photos, Atlanta

**PAWR Session: TU1E**

**Characterization and Measurement Based PA Design Techniques**

Chair: Václav Valenta, *ESA/ES-TEC*  
Co-Chair: Osman Ceylan, *Maury Microwave Corporation*

**Time: 8:00-9.45 ET**

**RWS Session: TU2A**

**Antennas 2: Smart Antennas**

Chair: Markus Gardill, *University of Würzburg*  
Co-Chair: Erick Djoumessi, *Intel*

**Time: 9.45-11:00 ET**

**RWS Session: TU2B**

**Circuits and Systems 2: Microwave to mmWave**

Chair: Robert H. Caverly, *Villanova University*  
Co-Chair: TBA

**Time: 9.45-11:00 ET**

**PAWR Session: TU2C**

**Power Amplifier Technology and Linearization 2**

Chair: Anding Zhu, *University College Dublin*  
Co-Chair: Roberto Quaglia, *University of Cardiff*

**Time: 9.45-11.25 ET**

**TU1E-1 Measurement and Characterization of High Power Devices for mmW Application**

O. Ceylan, J. Urbonas, T. Buber, *Maury Microwave Corporation, CA, USA*

**TU2A-1 Ka-Band Offset Spherical Reflector Antenna Fed by Dual-CP Horn Array with Switched Multiple-Beams**

G. Mishra, S. K. Sharma, *San Diego State University, CA, USA*

**TU2B-1 A Low-Power Duty-Cycled Impulse-Radio Ultrawideband (IR-UWB) Transmitter with Bandwidth and Frequency Reconfigurability Scheme Designed in 180 nm CMOS Process (Student Paper Finalist)**

D. K. Biswas, I. Mahbub, *University of North Texas, TX, USA*

**TU2C-1 GaN Long-Term Memory Compensation: Understanding the Device Physics to Achieve Better System Performance (Invited Paper)**

J. C. Pedro, T. R. Cunha, F. E. Barradas, L. C. Nunes, *Universidade de Aveiro, Portugal*

**TU1E-2 Two-Tone Intermodulation Performance of a 300 GHz Power Amplifier MMIC**

B. Schoch<sup>1</sup>, A. Tessmann<sup>2</sup>, A. Leuther<sup>2</sup>, P. Szriftgiser<sup>3</sup>, G. Ducournau<sup>3</sup>, I. Kallfass<sup>1</sup>, <sup>1</sup>University of Stuttgart, Germany, <sup>2</sup>Fraunhofer Institute for Applied Solid State Physics, Germany, <sup>3</sup>University of Lille, France

**TU2A-2 Switched Beam SIW Horn Arrays at 60 GHz for 360° Chip-to-Chip Communications**

P. Baniya, K. L. Melde, *University of Arizona, AZ, USA*

**TU2B-2 A Low-Power Integrating and Sampling Demodulator for 3-5 GHz IR-UWB Applications**

D. Schrüfer<sup>1</sup>, J. Röber<sup>2</sup>, A. Schwarzkopf<sup>2</sup>, T. Rabenstein<sup>2</sup>, T. Mai<sup>1</sup>, R. Weigel<sup>1</sup>, *Friedrich-Alexander-University Erlangen-Nuremberg, Germany, <sup>2</sup>eesy-IC GmbH, Germany*

**TU2C-2 Recursive Pre-Distorter for Hardware Efficient Digital Pre-Distortion**

D. Byrne, R. Farrell, J. Dooley, *Maynooth University, Ireland*

**TU1E-3 Mixed-Mode Active Load-Pull Using one Single-Ended Device-Under-Test**

K. Buisman<sup>1,2</sup>, J.-R. Perez-Cisneros<sup>2</sup>, W. Hallberg<sup>3</sup>, D. Nopchinda<sup>4</sup>, P. J. Zampardi<sup>5</sup>, <sup>1</sup>University of Surrey, UK, <sup>2</sup>Chalmers University of Technology, Sweden, <sup>3</sup>Qamcom IPR Technology AB, Sweden, <sup>4</sup>University College London, UK, <sup>5</sup>Qorvo, Inc., CA, USA

**TU2A-3 An Anti-Interference System for Stationary and Moving Interferers (Student Paper Finalist)**

F. Tamjid, T. Kvelashvili, O. Kilic, A. E. Fathy, *The University of Tennessee, TN, USA*

**TU2B-3 System-level Performance Analysis of High-Data-Rate Frequency-to-Amplitude Converter based CPFSK Transceiver at 60 GHz**

Y. Wang, M.-D. Wei, R. Negra, *RWTH Aachen University, Germany*

**TU2C-3 Peak Limited Digital Predistortion of a RF Power Amplifier using a Closed Loop Estimator**

R. Neil Braithwait, *Keysight Technologies, CA, USA*

**TU1E-4 An Active Load-Pull Technique to Emulate Outphasing Power Amplifiers**

J.-R. Perez-Cisneros<sup>1</sup>, W. Hallberg<sup>2</sup>, K. Buisman<sup>1,3</sup>, <sup>1</sup>Chalmers University of Technology, Sweden, <sup>2</sup>Qamcom IPR Technology AB, Sweden, <sup>3</sup>University of Surrey, UK

**TU2A-4 Dynamic Range Requirements of Digital vs. RF and Tiled Beamforming in mm-Wave Massive MIMO (Student Paper Finalist)**

A. A. Farid, M. Abdelghany, U. Madhoo, M. J. W. Rodwel, *University of California Santa Barbara, CA, USA*

**TU2B-4 Gallium Nitride Monolithic Microwave Integrated Circuits for Compact Ka-Band Earth Science Remote Sensing Frontend**

*F. Yamagishi, Y. Matsusaki, T. Shimazaki, T. Nakagawa, N. Iai, Japan Broadcasting Corporation, Japan*

**WE2C-4 Optimization of a High Frequency Radio Frequency Identification System for Tool Recognition in a Metal Environment**

*M. Fischer, D. Mair, G. Saxl, T. Ussmüller, University of Innsbruck, Austria*

**WE2D-4 MMIC GaAs X-band Isolator with Enhanced Power Transmission Response (Student Paper Finalist)**

*A. Ashley<sup>1</sup>, G. Lasser<sup>1</sup>, Z. Popovic<sup>1</sup>, A. Madanayake<sup>2</sup>, D. Psychogiou<sup>1</sup>, <sup>1</sup>University of Colorado Boulder, CO, USA, <sup>2</sup>Florida International University, FL, USA*

**WE2B-5 On the BER Analysis of OFDM Receivers Against Phase Noise Imperfection**

*B. Sen Aselsan A.S., Turkey*

**WE2C-5 Support Application for Configuring Optimal Relay Nodes in Wireless Sensor Networks**

*E. Oda, K. Kawauchi, T. Hamasaki, Hiroshima Institute of Technology, Japan*

SiRF Session: WE2E

**Device Modeling and Characterization Techniques**

Chair: Venkata Malladi, *NXP Semiconductors*  
Co-Chair: TBA

Time: 9:45-11.10 ET

**WE2E-1 SiGe and SOI Technologies for mmWave Applications (*Invited Paper*)**

*N. Cahoon, Globalfoundries, USA*

**WE2E-2 Experimental Extraction of Thermal Noise y Factors in a 14-nm RF FinFET technology (*Student Paper Finalist*)**

*X. Ding, G. Niu, A. Zhang, W. Cai, K. Imur, Auburn University, AL, USA*

**WE2E-3 Frequency Sensitivity of Integrated Oscillators to Nearby Conductors**

*A. Jha<sup>1</sup>, Kenneth K. O.<sup>2</sup>, <sup>1</sup>Renesas Electronics America, USA, <sup>2</sup>University of Texas Dallas, TX, USA*

**WE2E-4 Layout Optimization of Short De-embedding Structure for Accurate On-Chip Inductor Characterization**

*K. T. Muhammed Shafi, V. Baipadi, V. Vanukuru, GLOBALFOUNDRIES, India*

RWW2020 Student Competition

**RWS Session: TH1A**

**RFID, Wireless Power Transfer and Near-Field Systems**

Chair: Nuno Borges Carvalho, *Universidade de Aveiro*  
Co-Chair: Jasmin Grosinger, *Graz University of Technology*

**Time: 8.00-9:30 ET**

**RWS Session: TH1B**

**Wireless Networks**

Chair: Kevin Chuang, *MaxLinear*  
Co-Chair: TBA

**Time: 8.00-9:15 ET**

**WiSNeT Session: TH1C**

**Wireless Sensor Network: Localization and Sensing Applications**

Chair: Rahul Khanna, *Intel*  
Co-Chair: TBA

**Time: 8:00-9:15 ET**

**SHaRC Session: TH1D**

**Satellite System Concepts and Testing**

Chair: Charlie Jackson, *Northrop Grumman Corporation*  
Co-Chair: Holger Maune, *TU Darmstadt*

**Time: 8:00-9:15 ET**

**TH1A-1 RFID Tattoo for COVID-19 Temperature Measuring (Student Paper Finalist)**

T. M. Silveira<sup>1</sup>, P. Pinho<sup>2</sup>, N. B. Carvalho<sup>1</sup>, *Universidade de Aveiro, Portugal*, <sup>2</sup>Instituto Sup. de Eng. de Lisboa, Portugal

**TH1B-1 Base Station Selection Method for RAT-Dependent TDOA Positioning in Mobile Network**

N. Tsumachi, T. Ohseki, K. Yamaza, *KDDI Research, Inc., Japan*

**TH1C-1 Transfer Learning of Wi-Fi FTM Responder Positioning with NLOS Identification**

H.-W. Chan, A. I-Chi Lai, R.-B. Wu, *National Taiwan University, Taiwan*

**TH1D-1 Efficient Data Uploads to Satellite Formations by Rateless Codes and Adaptive Tracking**

A. Freimann<sup>1</sup>, T. Petermann<sup>1</sup>, K. Schilling<sup>1</sup>, H. Döbler<sup>2</sup>, B. Scheuermann<sup>2</sup>, *University of Würzburg, Germany*, <sup>2</sup>Humboldt University of Berlin, Germany

**TH1A-2 A Tile-based 8x8 Triangular Grid Array Beamformer for 5.7 GHz Microwave Power Transmission**

K. Arai, K. Wang, M. Toshiya, M. Higaki, K. Onizuka, *Toshiba Corp., Japan*

**TH1B-2 Analysis of VANET Wireless Networking Technologies in Realistic Environments**

M. N. Tahir<sup>1</sup>, M. Katz<sup>2</sup>, U. Rashid<sup>3</sup>, <sup>1</sup>Finnish Meteorological Institute, Arctic Space Center, Finland, <sup>2</sup>University of Oulu, Finland, <sup>3</sup>University of Helsinki, Finland

**TH1C-2 RF Energy Harvesting from GFSK-Modulated BLE Signal**

G. Paolini<sup>1</sup>, Y. Murillo<sup>2</sup>, S. Claessen<sup>2</sup>, D. Masotti<sup>1</sup>, S. Pollin<sup>2</sup>, A. Costanzo<sup>1</sup>, D. Schreurs<sup>2</sup>, *University of Bologna, Italy*, <sup>2</sup>KU Leuven, Belgium

**TH1D-2 S-Band Low Earth Orbit Reconfigurable Small Satellite System for Space Environment Sensing (Student Paper Finalist)**

N. Miguélez-Gómez, C. R. Mejias-Morillo, E. A. Rojas-Nastrucci, *Embry-Riddle Aeronautical University, FL, USA*

**TH1A-3 BER Analysis and Optimization of Direct Antenna Modulation for Magnetic Induction Communication**

R. Chapman, M. Prince, H. Guo, *Norfolk State University, VA, USA*

**TH1B-3 Throughput Performance Prediction Approach for Wi-Fi Site Surveys**

A. Tatsuta, Y. Shimazaki, T. Emura, T. Asada, T. Hamabe, *Panasonic Cooperation, Japan*

**TH1C-3 Wireless Sensor Network with Mesh Topology for Carbon Dioxide Monitoring in a Winery (Student Paper)**

J. Nelson, C. Andoh, A. Comia, L. Echeveria, J. Hopkins, M. Maniti, T. Pierce, *University of California Davis, CA, USA*

**TH1D-3 Extended Ground Station Concept and its Impact on the In-Orbit Communication with the Four-Nano-Satellite Formation NetSat**

A. Kleinschrod<sup>1</sup>, T. Horst<sup>2</sup>, E. Jager<sup>1</sup>, A. Freimann<sup>2</sup>, S. Dombrovski<sup>1</sup>, R. Haber<sup>1</sup>, K. Schilling<sup>1,2</sup>, *Zentrum für Telematik, Germany*, <sup>2</sup>Julius-Maximilians-Universität, Germany

**TH1A-4 Communication-Less Receiver-Side Resonant Frequency Tuning Method for Magnetically Coupled Wireless Power Transfer Systems (Student Paper Finalist)**

K. Matsuura, D. Kobuchi, Y. Narusue, H. Morikawa, *The University of Tokyo, Japan*

**TH1B-4 Towards the Flexible and Efficient Implementation of the 5G-NR RAN Physical Layer**

F. D. L. Coutinho, J. D. Domingues, P. M. C. Marques, S. S. Pereira, H. S. Silva, A. S. R. Oliveira, *Universidade de Aveiro, Portugal*

**TH1C-4 A Supercapacitor Powered Radar Sensor Node for Lamination into Wind Energy Rotor Blades**

T. Kyriñ<sup>1</sup>, S. Erhardt<sup>1</sup>, R. Weigel<sup>1</sup>, F. Lurz<sup>2</sup>, *Friedrich-Alexander-University Erlangen-Nuremberg, Germany*, <sup>2</sup>Hamburg University of Technology, Germany

**TH1D-4 Wireless Payload Thermal-Vacuum Testing for Lunar Harsh Environment (Student Paper Finalist)**

J. I. Sahr, D. Posada, N. Miguélez-Gómez, D. Korczyk, K. Pepin, J. Parkhurst, C. W. Hays, T. Henderson, E. A. Rojas-Nastrucci, *Embry-Riddle Aeronautical University, FL, USA*

**TH1A-5 EC Model for WPT and NFC Systems Interoperability Analysis**

K. R. Fischbacher<sup>1</sup>, L. Gortschacher<sup>1</sup>, E. Merlin<sup>2</sup>, U. Muhlmann<sup>2</sup>, F. Amtmann<sup>2</sup>, P. Priller, W. Bosch<sup>1</sup>, J. Grosinger<sup>1</sup>, *Graz University of Technology, Austria*, <sup>2</sup>NXP Semiconductors Austria, Austria, <sup>3</sup>AVL LIST GmbH, Austria

**TH1B-5 Portfolio Theory in Millimeter-Wave Coordinated Multi-Point Transmission**

L. Cheng, B. A. Huberman, M. Xu, *Next-Gen Systems CableLabs, CO, USA*

**TH1C-5 Multi-Detector Deep Neural Network for High Accuracy Wi-Fi Fingerprint Positioning**

C.-Y. Chen, A. I-Chi Lai, R.-B. Wu, *National Taiwan University, Taiwan*

**TH1D-5 Modeling A Loop Back Test For Radar Phased Array Digital Receiver Exciters Using Python**

J. Mortensen, M. Wicker, *University of Colorado Colorado Spring, CO, USA*

**TH1A-6 Hybrid Dual Band Radio Frequency and Solar Energy Harvesting System for Making Battery-less Sensing Nodes**

M. Hamza, M. Rehman, A. Riaz, Z. Maqsood, W. T. Khan, *Lahore University of Management Sciences; Pakistan*

**SiRF Session: TH1E**

**High-Frequency Circuits and Systems for 5G towards 6G**

Chair: Vadim Issakov, *University Magdeburg*  
Co-Chair: TBA

**Time: 8:00-9.25 ET**

**RWS Session: TH2A**

**Passive Components and Packaging**

Chair: Roberto Gómez-García, *University of Alcalá*  
Co-Chair: TBA

**Time: 9.45-11:00 ET**

**RWS Session: TH2B**

**Wireless Channels**

Chair: Fabian Lurz, *Hamburg University of Technology*  
Co-Chair: TBA

**Time: 9.45-10:15 ET**

**WiSNeT Session: TH2C**

**Wireless Sensors for Communication: Antennas, Radar and Positioning**

Chair: Paolo Mezzanotte, *University of Perugia*  
Co-Chair: Jeniffer Williams, *Intel*

**Time: 9.45-11:00 ET**

**TH1E-1 IC, Package, and System Technologies for 140GHz MIMO Hubs and 210/280GHz MIMO Backhaul Links (Invited Paper)**

M. Rodwell<sup>1</sup>, A. Ahmed<sup>1</sup>, A. Farid<sup>1</sup>, U. Solyu<sup>1</sup>, M. Seo<sup>1,2</sup>, *University of California Santa Barbara, USA*, <sup>2</sup>*Sungkyunkwan University, Korea*

**TH2A-1 Additively Manufactured Interdigital Filters for Ultra-Wideband Radar**

F. Rodriguez-Morales<sup>1</sup>, B. Brown<sup>2</sup>, A. Sutton<sup>3</sup>, M. Leu<sup>3</sup>, F. Liou<sup>3</sup>, S. Garrison<sup>4</sup>, A. Wolf<sup>1</sup>, *University of Kansas, KS, USA*, <sup>2</sup>*Honeywell FM&T, MO, USA*, <sup>3</sup>*Missouri University of S&T, MO, USA*, <sup>4</sup>*Sandia National Lab, NM, USA*

**TH2B-1 Spatially Resolved Multi-Transmitter Ka-Band Channel Measurements for Receiver Localization**

A. Schultze, S. Wittig, W. Keusgen, *Fraunhofer Heinrich Hertz Institute, Germany*

**TH2C-1 Hand Gesture Recognition Using FMCW Radar in Multi-Person Scenarios (Student Paper Finalist)**

D. V. Q. Rodrigues, C. Li, *Texas Tech University, TX, USA*

**TH1E-2 28GHz RX Frontends with Sub-harmonic-based mm-wave LO Generation in 16nm FinFET**

B. Jann<sup>1,3</sup>, S. Jain<sup>1,2</sup>, A. Ravi<sup>3</sup>, S. Patnaik<sup>4</sup>, A. Natarajan<sup>1</sup>, *Oregon State University, OR, USA*, <sup>2</sup>*Apple Inc., USA*, <sup>3</sup>*Intel Corp., USA*, <sup>4</sup>*Amazon, USA*

**TH2A-2 Balanced-Circuit-Based Dual-Band Bandpass Filter With Symmetrical Reflectionless Behavior**

M. Fan<sup>1</sup>, K. Song<sup>1</sup>, L. Yang<sup>2</sup>, R. Gómez-García<sup>2</sup>, *University of Electronic Science and Technology of China, China*, <sup>2</sup>*University of Alcalá, Spain*

**TH2B-2 Wireless Channel and Electromagnetic Environments for Through-the-earth (TTE) Communications in an Underground Coal Mine**

C. Zhou, N. Damiano, *National Institute for Occupational Safety and Health, PA, USA*

**TH2C-2 Velocity Estimation Based on Two-Dimensional Cross-Correlation of Radar Signals**

M. Scherhäufl<sup>1</sup>, H. Haderer<sup>2</sup>, A. Stelzer<sup>3</sup>, *Linz Center of Mechatronics GmbH, Austria*, <sup>2</sup>*Inras GmbH, Austria*, <sup>3</sup>*Johannes Kepler University Linz, Austria*

**TH1E-3 A 25-37 GHz VCO Employing Stacked-Coupled Switched Inductor and Co-Tuned Buffer in 55nm CMOS for Multi-band 5G mmW Applications**

R. Wang<sup>1</sup>, J. Li<sup>1</sup>, C. Shi<sup>1</sup>, J. Chen<sup>2</sup>, R. Zhan<sup>1</sup>, *East China Normal University, China*, <sup>2</sup>*University of Houston, TX, USA*

**TH2A-3 Impact of Surface Effects on RF Switching PIN Diodes**

B. Stephanson, R. H. Caverly, *Villanova University, PA, USA*

**TH2C-3 Range Doppler Migration Synthesis for Realistic Radar Target Simulation**

A. Diewald, T. Antes, B. Nuss, M. Pauli, T. Zwick, *Karlsruhe Institute of Technology, Germany*

**TH1E-4 85 fs RON×COFF and CP1dB@28GHz > 25dBm Innovative PIN Diode Integrated in 55 nm BiCMOS Technology Targeting mmW 5G and 6G Front End Module**

O. Foissey<sup>1</sup>, F. Gianesello<sup>1</sup>, V. Gidel<sup>1,2</sup>, C. Durand<sup>1</sup>, A. Gauthier<sup>1</sup>, N. Guitard<sup>1</sup>, P. Chevalier<sup>1</sup>, M. Hello<sup>1</sup>, J. Azevedo-Goncalves<sup>1</sup>, D. Gloria<sup>1</sup>, V. Velayudhan<sup>3</sup>, J. Lugo<sup>1</sup>, *STMicroelectronics, France*, *Univ. Nice Sophia-Antipolis, France*, *CEA-LETI, France*

**TH2A-4 Lumped Element High Precision X-Band Bandpass Filter with Through Silicon Via (TSV) Integrated Passive Device (IPD) Technology**

K. R. Shin, K. Eilert, *ON Semiconductor, USA*

**TH2C-4 Effects of Target Displacement on Single-Snapshot DOA Estimation in Automotive Radar**

H. Liu<sup>1,2</sup>, J. Fuchs<sup>1</sup>, T. Horn<sup>2</sup>, M. Gardill<sup>3</sup>, *Friedrich-Alexander-Universität Erlangen-Nürnberg, Germany*, <sup>2</sup>*InnoSenT GmbH, Germany*, <sup>3</sup>*Julius-Maximilians-Universität Würzburg, Germany*

**TH2A-5 X-Band Transmitter Leakage Canceller for FMCW Radar Application**

M. Mahdi, M. Darwish, H. Tork, A. A. Eltager, *Military Technical College, Egypt*

**TH2C-5 Intermodulation Radar with Dynamic Fundamental Tone Cancellation for Linearity Improvement**

D. Tang, A. Mishra, C. Li, *Texas Tech University, TX, USA*

**SHaRC Session: TH2D**

**Antennas & RF-Front-ends for Satellite Applications**

Chair: Holger Maune, *TU Darmstadt*  
 Co-Chair: Charlie Jackson, *Northrop Grumman Corporation*

**Time: 9:45-11:00 ET**

**SiRF Session: TH2E**

**Emerging SiRF Applications**

Chair: Vadim Issakov, *University Magdeburg*  
 Co-Chair: TBA

**Time: 9.25-11.45 ET**

**TH2D-1 High-Speed FPGA-Based Payload Computer for an In-Orbit Verification of a 71-76 GHz Satellite Downlink**

*L. Manoliu<sup>1</sup>, B. Schoch<sup>1</sup>, M. Koller<sup>1</sup>, J. Wiczorek<sup>2</sup>, S. Klinkner<sup>1</sup>, I. Kalfass<sup>1</sup>,  
<sup>1</sup>University of Stuttgart, Germany,  
<sup>2</sup>Thales Alenia Space Deutschland, Germany*

**TH2E-1 Towards a Quantum Computer on a Chip (Invited Paper)**

*R. Staszewski, University College Dublin, Ireland*

**TH2D-2 Massive-MIMO and Digital mm-Wave Arrays on RF-SoCs using FDM for M-Fold Increase in Antennas per ADC/DAC (Student Paper Finalist)**

*N. Akram<sup>1</sup>, A. Madanayake<sup>1</sup>, S. B. Venkatakrishnan<sup>1</sup>, J. L. Volakis<sup>1</sup>, D. Psychogiou<sup>2</sup>, T. L. Marzetta<sup>3</sup>, T. S. Rappaport<sup>3</sup>,  
<sup>1</sup>Florida International University, FL, USA, <sup>2</sup>University of Colorado Boulder, CO, USA, <sup>3</sup>New York University, NY, USA*

**TH2E-2 Broadband Pulse-Based THz Sources and Detectors in Silicon and their Applications (Invited Paper)**

*A. Babakhani, University of California Los Angeles, CA, USA*

**TH2D-3 X-band Phased Array Antenna with Integrated TR Modules for Re-entry Spacecraft**

*Y. J. Ren, G. Yang, General Microwave Technologies, Inc., CA, USA*

**TH2D-4 Design of X- and Ka-Band Reflectarray Antennas for Intercelestial Communication Using CubeSat Relay**

*N. Virushabados, N. Mahjabeen, H. S. P. Baksh, R. Henderson, University of Texas at Dallas, TX, USA*

**TH2D-5 Dual Mode Phased Array Antenna using Silicon RFICs based Integrated Beamforming Network**

*C. Laffey<sup>1</sup>, S. K. Sharma<sup>1</sup>, R. Farkouh<sup>2</sup>, J.-C. S. Chieh<sup>2</sup>,  
<sup>1</sup>San Diego State University, CA, USA, <sup>2</sup>Naval Information Warfare Center Pacific, CA, USA*

# 96<sup>th</sup> ARFTG MICROWAVE MEASUREMENT SYMPOSIUM

- ABBREVIATED PROGRAM -

MONDAY, 18 JANUARY 2021 - FRIDAY, 22 JANUARY 2021

**General Co-Chairs:** Rusty Myers, Andrej Rumiantsev  
**Technical Program Co-Chairs:** Jeffrey Jargon, Peter Aaen

## Monday, January 18th, 2021

### NIST-ARFTG Short Course on Microwave Measurements

9:45 am - 11:15 am ET **First live Q&A** (Live)

8:00 pm - 9:30 pm ET **Second live Q&A** (Live)

### NVNA Users Forum

11:30 am - 12:30 am ET **Session with Q&A** (Live)

## Tuesday, January 19th, 2021

9:45 am - 10:25 am ET **Invited Talk: Modulation Analysis – A Novel Way to Characterize Components under Modulated Operating Conditions** (Live)

Jan Verspecht (Keysight Technologies)

10:25 am - 10:40 am ET **ARFTG Business meeting** (Live)

10:40 am - 11:15 am ET **Session A Q&A** (Live)

## Wednesday, January 20th, 2021

8:00 am - 9:45 am ET **RWW/ARFTG Plenary Keynote** (Live)

9:45 am – 10:45 am ET **Panel Session: Uncertainty in mmWave Over-the-Air Test** (Live)

Moderated by Dylan Williams (NIST) and Kate Remley (NIST)

10:45 am - 11:15 am ET **Session B Q&A** (Live)

11:30 am - 12:30 am ET **MicroAps**

## Thursday, January 21st, 2021

9:45 am – 10:25 am ET **Invited Talk: Traceability and Uncertainty – What Are They? And Why Do We Need Them?** (Live)

Nick Ridler (National Physical Laboratory)

10:25 am - 10:40 am ET **Keithley Award Ceremony** (Live)

10:40 am - 11:15 am ET **Session C Q&A** (Live)

### ARFTG On-Wafer Users Forum

11:30 am - 12:30 am ET **Session with Q&A** (Live)

## Friday January 22nd, 2021

8:00-12:00 am ET **Joint ARFTG/RWW-2021 Workshop: Modeling and Design Tools for Accelerated Design of 5G GaN PAs**

Organizers: Nicholas Miller (AFRL), Patrick Roblin (Ohio State University)

ARFTG Event
