

**2013 IEEE PES Asia-Pacific Power and Energy Engineering
Conference (APPEEC)**

**8 – 11 December, 2013
Kowloon Shangri-La Hotel
Hong Kong**

Paper Title Index

Paper Title	Paper Number
A Bayesian Network Approach for Human Reliability Analysis of Power System	0047
A Binary Formulation of SAIDI for the Predictive Reliability Assessment of Radial Distribution Systems with Tie-lines	0189
A combined phase selector element based on the superimposed sequence components for parallel lines on the same tower	0173
A Fast and Effective EA for Service Restoration of Compensated Distribution Networks	0108
A Fast Method of Voltage Stability Margin load for Limit Induced Bifurcation	0318
A Fuzzy Bi-objective Unit Commitment Model Considering Source-grid-load Interactions	0177
A Hierarchical Control of Microgrid based on Droop Controlled Voltage Source Converter	0112
A Hybrid Decision Diagram Model for Service Restoration in Distribution System With Distributed Generations	0133
A Multi-Agent Based Self-Healing Smart Grid	0280
A New Parameters Identification of Single Area Power System Based LFC Using Segmentation Particle Swarm Optimization (SePSO) Algorithm	0223
A Novel Adaptive Loss of Excitation Protection Criterion Based on Steady-State Stability Limit	0062
A Novel Highly Efficient Tank-Less Inverter for Renewable Energy Powered Applications	0200
A Novel Kind of Monitoring and Analyzing System for Digital Substation Functional Loop	0161
A Novel Substation Area Backup Protection for Smart Substation	0069

A Prediction Technique of Power Transformer Condition Assessment via DGA Parameters	0104
A Probabilistic Method of Operational Reserve Evaluation using Monte Carlo Simulation	0260
A Probabilistic Model for Optimal Joint Allocation of Energy and Spinning Reserve Using Primal-Dual Interior Point Method	0231
A Risk Assessment Method based on Multi-stage Overloading in Smart Distribution Network	0022
A Simulation Study of Electric Vehicle Charging in Microgrids	0006
A Smart Monitoring and Control System for the Household Electric Power Usage	0090
A study on swing and buckling of Y-type insulator strings under strong wind action for ± 800 kV UHDV transmission lines	0059
A Survey on Bad Data Injection Attack in Smart Grid	0089
A Transmission-Constrained Stochastic Unit Commitment Model with Real-Time Pricing for High Wind Power Integration	0131
Active Power Real-time Control Strategy for Wind Farms Coordinated with Power System	0145
Adequacy Evaluation of Generating System Recognizing Random Fuzzy Wind Speed	0263
Advanced ROCOF Protection of DFIG Wind Turbines	0099
An Economic Dispatch Model Considering the Volatility and Uncertainty of Wind Power	0214
An economic, ecological and energetic assessment of battery electric, hybrid and fuel cell cars	0290
An Improve MPP of PV Cells with Converter by using Passive Inductor and Capacitor for Comparative in both Continuous and Discontinuous Modes	0034
An Improved Droop Control Based on Complex Virtual Impedance in Medium Voltage Micro-grid	0174
An Intelligent Real-Time Decision Support Tool for Power System Restoration	0192
An Operation Availability Index for the Evaluation of HVDC Transmission Reliability and Its Influence on the Power System	0213
Analysis and Calculation of the Instantaneous Power Based on A New Method of Load Identification	0138
Analysis and Control of Stochastic Power Fluctuations on the Tie-line of Interconnected Power Systems	0065

Analysis for Large-scale Integration of PV system in Japan with a High Time-Resolution Optimal Power Generation Mix Model	0046
Analysis of Doubly Fed Induction Generator Dynamic Action to Power Angle Oscillation	0052
Analysis of Dynamic Reactive Power Demand Characteristics of Inverter Stations of Multi-infeed HVDC	0255
Analysis of Human Reliability in Power System Switching Operation considering Dependency of Operators	0087
Analysis of Shaft Torque Amplification Caused by Interaction between AC and DC System	0111
Analysis of the dc Dynamics of VSC-HVDC Systems Using a Frequency Domain Approach	0250
Analysis of the NDZ formulation theory of active frequency shift islanding detection method for grid-connected PV system	0238
Analysis of Travelling Wave Protection Criterion Performance for Double-circuit HVDC	0193
Application of ACSA to Solve Single/Multi Objective OPF Problem with Multi type FACTS Devices	0287
Application of Condition Monitoring Techniques in Managing the 11kV Switchgear in HK Electric	0317
Arc Fault Generation and Detection in DC Systems	0040
Automatic Generation Control of Multi-Area System Using Two Degree of Freedom Fractional Order PID Controller: A Preliminary Study	0172
Available Transfer Capacity Calculation Based on Carbon Emission Reduction Strategy	0079
Calculation of Load Supply Capability for Distribution Networks with Distributed Generations	0159
Calculation of Reactive Power Compensation Capacity in Wind Farms Based on Chance Constrained Programming	0156
Carbon Reduction Impact Simulation of Cross-region Power Transmission in China	0269
Characteristics of static voltage stability for distributed generation integrated into power system and its impacts analysis	0147
China's Valuable Experiences in Defending Large-scale and Long-time Blackouts	0054
Comprehensive Configuration of Wind Turbine and Switch Capacitor in Distribution Network Based on Bi-Level programming	0095
Comprehensive Energy-saving Potential Evaluation of Distribution	0088

Network Based on Analytical Hierarchy Process(AHP)	
Conductor Selection of Transmission Line Connected to Wind Farm Considering the Operation Characteristic	0186
Consensus-Based Droop Control Synthesis for Multiple Power Converters in Lossy Micro-Grids	0105
Control and Performance of a Cascade Low-frequency High-power Multilevel Converter for SSR Mitigation	0216
Coordinated Charging Strategy for Battery Switch Station Considering Battery Charging Characteristics	0252
Coordinated Control of Battery Energy Storage System in a Microgrid	0155
Coordination Frequency Control Strategy Design of Wind Farm Base on Time Sequence control	0191
Detection and Classification of Low-frequency Power Disturbances Using A Morphological Max-lifting Scheme	0232
Detection of Broken Bars in Induction Motor Based on Multiple Coupled Circuit Model with Optimized Parameters	0101
Development of a Cloud-based Renewable Energy Monitoring Platform	0123
Development of a novel asset management system for power transformers based on Ontology	0120
Differential Games based Load Frequency Control of Interconnected Power System	0007
Differentiated Configuration Method of Reactive Power Compensation for Distribution Systems	0142
Direct Virtual Power Control of VSC-HVDC for Starting Up of Offshore Wind Farm	0221
Distributed Communication-based Model Predictive Control for Long-term Voltage Instability	0203
Distributed Generation Location Using Multi-Agent System for Reliability Assessment	0234
Distributed Generation Planning in Distribution Network Based on Hybrid Intelligent Algorithm by SVM-MOPSO	0053
Distributed Photovoltaic Power Generation for Energy-Poor Households: The Nigerian Perspective	0098
Distribution network planning with a large amount of small scale photovoltaic power	0102
Dynamic Behavior of Photovoltaic Single-phase Inverter Following Faults in Medium-voltage Networks Using CRIEPI's Power System Simulator	0163

Dynamic Modeling and Simulation of Distributed Static Compensators in System Impact Studies	0015
Economic Dispatch for Power Systems with Wind and Solar Energy Integration Considering Reserve Risk	0150
Economic Dispatch Solution Considering Demand and Wind Speed Uncertainties Based on Newton's Method	0210
Electric Grid Vulnerability Assessment under Attack-Defense Scenario Based on Game Theory	0139
Emergency Control of Power Grid Based on Hybrid Particle Swarm Optimization	0014
Experience with Partial Discharge Detection at High Voltage Gas Insulated Switchgear by Ultra High Frequency (UHF) Method	0319
Fast Identification of Inrush Current Using a Weighted Morphological Approach	0224
Fault Detection and Diagnosis of an HVAC System Using Artificial Immune Recognition System	0202
Field Studies for Transient Stability in Continuous Operation and Contingency Condition During 3- \emptyset Short Circuit at PCC for Grid Connected 10MW Kastina Wind Farm	0013
Flatlands Wind Farm Power Generation and Wake Effect Analysis Based on Jensen Model	0092
Fused Converter Topology for Wind-Solar Hybrid Systems	0275
Generalized Phase Compensation for PSS Design	0201
Generic SPWM Technique for Multilevel Inverter	0031
Ground Leakage Current Elimination in a Transformerless Unipolar Modulation Based Single Phase Grid-Connected Photovoltaic System	0176
Guishan Off-Shore Wind Power Farm Interconnection: A Real Project Study	0194
Half Load-cycle One-cycle Control for Inverter	0229
Harmonic Current Suppression for Three Phase PV Generation System under Unbalanced Grid Voltage	0168
Harnessing hydroelectric power using Savonius rotor coupled with asynchronous generator connected to grid	0042
Hierarchical Control Architecture for Demand Response in Smart Grids	0170
Identification of Current Transformers Saturation Intervals Using Morphological Gradient and Morphological Decomposition	0226
Identification of Photovoltaic Power System Based on Sensitivity Analysis	0264

Impact and Cost Evaluation of Electric Vehicle Integration on Medium Voltage Distribution Networks	0027
Impact of DFIG-based Wind Farm on Transient Stability of Single Machine Infinite Bus System	0141
Impact of Large-scale Wind Power Integration on Grid Fault Identification and Real-time Decision-making Technologies in Stability Control Systems	0239
Impact of the Distributed Photovoltaic on the Current Protection of 10kV Distribution Network	0085
Impacts of communication failure on power system operations	0152
Impacts of Wind Power Penetration on Risk Constrained Economic Dispatch	0230
Improved FRT Control Scheme for DFIG Wind Turbine Connected to a Weak Grid	0259
Improved Power Control of Photovoltaic Generation System under Unbalanced Grid Voltage Conditions	0167
Improved PSO Algorithm for Microgrid Energy Optimization Dispatch	0116
Inspiring Energy Conservation Through Open Source Metering Hardware and Embedded Real-Time Load Disaggregation	0036
Intelligent Accident Treatment and Decision System Based on Centralized Control Center for Power System	0261
Interaction of Ethernet Traffic in Power Utility Communication Networks	0262
Internal Pricing Mechanism for Hierarchical Power Consumption/Generation Scheduling in Industrial Enterprise Microgrid	0070
Investigation of Capacity Decay due to Ion Diffusion in Vanadium Redox Flow Batteries	0220
Investigation on the Capacitive Characteristics of Single-phase Diode-bridge Converter Based Loads	0209
Key Technologies for Renewable Energy Integration- A Full Scale Demonstration at Hainan Island	0187
Load Frequency Control of Area Power System With Multi-source Power Generation Units Based on Differential Games Tracking Control	0115
Low Order Harmonics Minimization in Multilevel Inverters using Firefly Algorithm	0267
Macro Demand Spatial Approach (MDSA) Combined with Principal Component Analysis and Qualitative Analysis on Spatial Demand Forecasting for Main Development Area in Transmission Planning	0215
Maximum Power Point Tracking for Wind Generator System Using	0121

Sliding Mode Control	
Microchip Based Embedded System Design for Achievement of High Power Factor in Electrical Power Systems	0049
Mitigation of voltage Sags in CIGRE Low Voltage Distribution Network	0058
Model Validation of PV Power Generation Unit Based on Grid Voltage Disturbance Test	0061
Modeling and Optimization of Electric Vehicle Charging Load in a Parking Lot	0271
Modeling of A Central Heating Electric Boiler Integrated with A Stand-alone Wind Generator	0228
Modeling of Photovoltaic Generation Unit for Power System Studies	0086
Multi Time-scale Dynamic Models for Doubly-fed Induction Generator in DIgSILENT	0185
Multi-level Control of Grid-tied DC Microgrids	0081
Multi-objective optimal power flow model for power system operation dispatching	0151
Multiple Data Fusion for Fault Diagnosis of Power Grid	0244
New Possibilities in Field Testing of Distributed Protection Systems	0140
Nondetection Index of Anti-Islanding Passive Protection of Synchronous Distributed Generators	0100
Nonlinear Predictive Control for Active Power Filter	0143
NSDD and Substation Fire Incidents	0233
Offshore Wind Resource Assessment Based on WRF Model	0184
On managing the integration of large shares of renewables in electricity supply systems	0289
Online Monitoring and integrated Analysis System for EV Charging Station	0149
Online Strategy for Boiler Scheduling During the Blast Furnace Blowing Down	0257
On-Off based Charging Strategies for EVs Connected to a Low Voltage Distribution Network	0196
Optimal Allocation of Spot Market and Bilateral Contract Transactions through Quantity Declaration Adjustments	0249
Optimal Placement of Protective Devices For Improving Reliability Indices in Microgrid System	0273
Optimal Scheduling the Wind-Solar-Storage Hybrid Generation System Considering Wind-Solar Correlation	0118

Oscillation Source Location Based on Abnormal Signal Analysis	0084
Photovoltaic Power Penetration Capacity Assessment Considering Static Voltage Stability	0117
PMU-based Voltage Instability Detection through Linear Regression	0012
Potential for Cross-Taiwan Strait Transmission System Development	0198
Power Quality Mitigation Measures for Advanced Building Facilities	0320
Power System Probabilistic Production Simulation Containing Large-scale Wind Power and Photovoltaic Power	0041
Power System Transient Stability Assessment Based on Online Sequential Extreme Learning Machine	0096
Power Transformer Condition Monitoring and Fault Diagnosis with Multi-agent System based on Ontology Reasoning	0207
Probabilistic Evaluation of Oscillatory Stability Margin with Large-Scale Wind Generation	0050
Profit Enhancement Through Optimized Operation of Photovoltaic Systems with Elastic Demand	0075
Promoting Cable Ampacity by Filling Low Thermal Resistivity Medium in Ducts	0254
Protecting Modular Multilevel Converters (MMC) against AC Fault by Deadbeat Control	0103
PSO-based Sugeno Fuzzy Logic Controller of Photovoltaic Generator for Frequency Stabilization in Stand-Alone Power System	0197
Reactive Power Coordinated Control at the Gateway between Provincial and Regional Power Grids	0183
Reactive Power Optimization Considering the Probability of Voltage Violation Due to Wind Farm Connection	0107
Realistic Integrated Grounding and Electromagnetic Interference Analysis Accounting for GIS, Cables and Transformers During Normal and Fault Conditions	0284
Real-time Simulation on Wind Power System Dynamics Incorporating STATCOM	0154
Reliability Analysis for Intelligent Protection System of Smart Substation	0190
Reliability Assessment for Power Systems with Large-scale Renewable Energy Sources	0169
Reliability Evaluation of Power Grids Considering Worm Spreading Pattern in SCADA	0270
Renewable Energy Portfolio Planning using the Cross-Entropy Method	0277
Research on a Mal-operation Case of Differential Protection in UHV	0023

Transformer	
Research on methods of forecasting unburned carbon content in the fly ash from coal-fired power plant	0243
Research on Modeling and Appliance of a New Price Mechanism Demand Response	0164
Research on Summation Impedance Relay with Ability to Identify High-Resistance Ground Fault	0217
Review of Transmission Network Planning in Market Environment	0044
Ride-through for important auxiliary equipment drive inverter	0218
Risk-based Dynamic Security Assessment under Typhoon Weather for Power Transmission System	0048
Risk-constrained Coordinative Dispatching for Battery Energy Storage Systems of Wind Farms	0033
Robust Current Control Design of Voltage Source Converter under Unbalanced Voltage Conditions	0093
Robust Current Control of Doubly Fed Wind Turbine Generator under Unbalanced Grid Voltage Conditions	0146
Saturation Detection of Current Transformers for Protection Blocking Based on Waveform Symmetry Using Morphological Skeleton	0227
Security Requirements for Smart Grid Services in Japan	0242
Series Arc fault studies and modeling for a DC distribution system	0205
Simultaneous Optimal Placement and Parameter-Tuning of SVC, TCSC and PSS Using Honey-Bee Mating Optimization	0204
Single Ended Primary Inductor Converter Reliance of Efficiency on Switching Frequency for use in MPPT application	0127
Smart Mobility for Green University Campus	0268
State of Charge Estimation of an All-Vanadium Redox Flow Battery Based on a Thermal-Dependent Model	0258
State-of-Charge Estimation of LiFePO ₄ /C Battery Based on Extended Kalman Filter	0129
Strategies of Residential Peak Shaving With Integration of Demand Response and V2H	0219
Stress Calculation Method for Overhead Line Conductors under Ice Overload Condition Considering Material Plasticity	0074
Study of Sheath Circulating Current and Loss-reducing of 500kV Long-distance Submarine Cables	0237
Study on Effectiveness Evaluation of the Siting of DG Based on a TOPSIS Method-based Approach	0039

Study on The Equilibrium Dispatching Strategy in Microgrid Based on Replicator Dynamics Algorithm	0182
Study the Collapse of the High Voltage Wave Shape under AC Breakdown Voltage	0292
The Application of Bayesian Network Theory in Transformer Condition Assessment	0094
The Application of Heat Transfer Analysis in Condition Monitoring System of Wind Generator	0286
The Challenges of Deploying Smart Metering in Hong Kong	0316
The Comparison of Conductor Stress Calculation Methods for Overhead Line under Extreme Weather Conditions	0055
The Dynamic Characteristics of Photovoltaic Generation System Under Partially Shaded Conditions	0135
The Future Organization of Danish Electricity Market for Integrating DERs - A View of FlexPower Project	0248
The impact of distributed wind power generation on voltage stability in distribution systems	0148
The Impact of LVRT on the Transient Stability of Power System with Large Scale Wind Power	0051
The Important Role of Feature Selection when Clustering Load and Generation Scenarios	0025
The impulse grounding impedance computation in HVDC transmission line tower	0241
The Lightning Contingency Probability Analysis on Transmission Tower with Line Arresters Protection	0272
The Multiple Uncertainty Impact of Large-scale Grid-connected PV System on Available Transfer Capability Assessment	0137
The Power Output Characteristics of Jiuquan Wind Power Base and Its Reactive Power Compensation	0130
The research for distribution of reserve with large scale wind power connecting into system	0180
The Research of Power Market Patterns Incorporation of Large-scale Wind Power	0038
The Review of Load Scheduling Model Research Based on Demand Response Method	0199
The Study of Operating Overvoltage Suppression Measures in Black-Start Process Based on Conversion from BPA to PSCAD Component Models	0166
The Study of Technical Support System of Blackout Start for Guangxi	0097

Power Grid	
The Study on Effect of Random Maintenance Quality of Components on Composite Power System Reliability	0222
The Unit Commitment Model with Wind Power Connection Based on Bad Operation Scenario Set	0171
The value of using chance-constrained optimal power flows for generation re-dispatch under uncertainty with detailed security constraints	0077
Transient Stability Constrained Optimal Power Flow Using 2-Stage Diagonally Implicit Runge-Kutta Method	0134
Transient Stability of a Distribution Network with DFACTS Devices and FSWT	0083
Transmission Line De-icing Outage Scheduling Based on Risk Assessment	0114
Validation for Compatible Modular Multilevel Converter Models using PSCAD/EMTDC	0236
Variable-speed Variable-pitch Coordinated Control Strategy of Wind Turbine Ramping Power	0063
Verification Tests for DTS System Measure and Calculate Power Cable Temperature	0017
Voltage and Reactive Power Control Method for Distribution Grid	0314
Voltage Change Based Fault Location in Distributed Network Considering Distributed Generations	0072
Voltage Sensitivity Based Site Selection for PHEV Charging Station in Commercial Distribution System	0132
WAMS-Based Transfer Capacity Assessment in Multi-machine Systems	0122
What's the Difference between Traditional Power Grid and Smart Grid? - from Dispatching Perspective	0008
Wind Power Prediction Model Considering Smoothing Effects	0124
